MASTER ACADEMIC STUDIES

Digital Techniques, Design and Production in Architecture and Urban Planning

Standard 00. Introduction

The study program of the Master academic studies – Digital Techniques, Design and Production in Architecture and Urban Planning presents the continuation of the UnderMaster academic studies of Architecture at the Faculty of Technical Sciences, University of Novi Sad. The educational architectural curriculum envisages various study programs from basic designer disciplines to courses dealing with more specific topics and implementation of contemporary technologies in architecture, where this study program belongs.

Department of Architecture and Urban Planning insists on the multidisciplinary approach, which is the main approach in studying architecture. The study program Digital Techniques, Design and Production in Architecture and Urban Planning is exactly characterized by an interdisciplinary approach, which enrolls several other Departments from the Faculty of Technical Sciences in its educational process – from the Department of Civil Engineering, to Electro-technical and Mechatronics Department. A meaningful Department of Architecture and Urban Planning development strategy aspect is based on the possibility of expansion and exchange of knowledge through an intensive collaboration with other Architectural Faculties and Departments in the region, especially from Europe, which resulted in hiring visiting professors from relevant Universities, which contributes to the education of the students and its quality.

We see a greater mobility of students and teaching staff and a greater number of international research projects as a chance for generating a unique and recognizable position of the Department in the international terms. This program should, in the framework of its study group, give the students the opportunity to additionally concretize their knowledge from the field of digital technologies and their application in architecture, based on understanding the basic principles from various engineering fields.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Digital Techniques, Design and Production in Architecture and Urban Planning

Standard 01. Programme Structure

The name of this study programme of Master Academic Studies is Digital Techniques, Design and Production in Architecture and Urbanism.

Upon completion of studies student receives academic title: Master Engineer of Digital Design in Architecture.

The outcome of the learning process at this level of study is the knowledge that enable students, to work with specialized software tools in the field of new technologies in architecture, to use professional literature, the application of knowledge in solving practical problems in the field, or to continue their studies at the specialized or doctoral studies (if they decide to do so).

The prerequisites for enrolling the study programme are completed undergraduate studies, architecture or related disciplines, with at least 240 ECTS and passed enrolment exam. According to the Regulations on enrollment at study programs, when entering candidate can win up to 100 points based on grade point average in undergraduate studies and the results achieved in the entrance exam. The average score of the first university degree brings a maximum of 40 points.

The entrance examination will be conducted on the topic "Evaluation of knowledge in the field of digital technologies in Architecture". In this part of the entrance examination it is possible to win up to 60 points. After entrance examination Student Services publishes the final list of candidates by the number of points earned, according to which the enrollment is carried out.

The study program of Master Academic Studies Digital Technology, Design and Production in Architecture and Urbanism lasts one year and worth 60 ECTS. This study program includes required and selective courses, professional practice and master thesis. Within the program there are three required courses and four selective positions in which students choose courses depending on personal preferences.

Course content and type of each object are given in the Curriculum of study programme or in the Subject Specification Tables.

The study program of each course is designed to give students the opportunity to concretize problem on specific issues that have certain areas of digital technologies in architecture.

Subjects in this study program last one semester, and thereby make the appropriate number of ECTS credits. Standards established that one ECTS credit equals approximately 30 hours of student activities (lectures, exercises, preparation for exams, ...). Student obligations on the exercises may include the writing of seminar papers and homework, project assignments, semester and graphic works in which every activity of students during the teaching process is monitored and evaluated by Regulation of teaching, methodology of awarding ECTS, evaluation criteria of exam prerequisites and by method of student knowledge assessment which was adopted at faculty level.

Upon enrollment each student is assigned an advisor who directs her/him, according to student interests, and which elective positions to choose, where to do the internship and which thesis topic to choose. The proposal that compile the student and her/his advisor approves the Commission for the quality of the study program. Advisor, during studying at the Faculty, follows the work and progress of the candidate that has been added to.

Teaching is done through lectures and exercises. During the lectures the provided material is thought, using appropriate didactic materials, with the necessary explanations that contribute to a better understanding of the subject matter.

On exercises, which follow the lectures, concrete tasks are solved and examples that further illustrate the material are presented. On exercises, also, additional explanations of the material which is presented in lectures are provided.

The study program envisage that students, according to their preferences during studying, carry out the required professional practice in architectural firms. Classes are held in the amphitheater, computer labs and classrooms-workshops in which models are made or displayed.

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Digital Techniques, Design and Production in Architecture and Urban Planning

Standard 02. Programme Objectives

The purpose of the study programme is the education of students for the profession of Master engineer of Digital design in Architecture in accordance with the needs of architectural profession and constant development and implementation of new technologies in construction and design process.

Through realization of this master study program of academic studies are educated engineers masters of Digital techniques, design and production in architecture and urbanism who are qualified for the call of CAAD specialist and possess competence in the European and World scene.

At the same time, we get educated staff that meets the needs of national labor market in practical application of knowledge and skills necessary for the design and construction of specific architectural programs and tasks.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Digital Techniques, Design and Production in Architecture and Urban Planning

Standard 03. Programme Goals

The objective is to achieve student's scientific competencies and academic skills in the field of Digital design techniques and production in Architecture and Urbanism. This also includes the development of creative abilities in considering problems and the ability of critical thinking, the development of teamwork skills and the mastering of specific practical skills necessary in the profession.

The objective of the study programme is also to educate an expert who possesses sufficiently consistent and useful knowledge in the field of design, visualization and building construction that in the process of drafting design and construction documentation including CAD / CAM technologies.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Digital Techniques, Design and Production in Architecture and Urban Planning

Standard 04. Graduates' Competencies

Master students of the Master academic studies in Architecture and Urban Planning are competent to solve real problems in the practice, as well as to continue education if they decide so. Also, the master graduates are qualified to acquire the title of the chief designer in the field of Digital Design, Techniques and Production in Architecture. The competences include, above all, the development of the ability for critical thinking, ability of problem analysis, solution synthesis of real problems in the field of CAD/CAM technologies in architecture Qualifications that indicate the end of the Master academic studies acquire students:

- -who have demonstrated systematic knowledge and understanding in the field of digital design in architecture that complements the knowledge gained at the under Master academic studies, being the basis for developing critical thinking and application of knowledge;
- -who are able to apply knowledge in solving problems in the new or unknown environment in wider or multidisciplinary fields within the educational-scientific field of the study;
- -who are able to clearly and unambiguously transfer knowledge and the way of making conclusions to the professional and wider public;
- -who possess the ability to continue the studies in the way they independently choose.

When it comes to the specific capabilities of students, mastering the study programme of the master studies, the students acquires detailed knowledge and understanding of all disciplines of the chosen study group, as well as the ability for solving specific problems using the scientific methods and procedures. Master students of Digital Design, Techniques and Production in Architecture are able to adequately write and present results of their research, that is, to concretize and present their project work.

During the study we insist on intensive use of CAD / CAM technology, specific hardware resources, as well as training students to use the latest software packages for the design and graphic presentation.

Graduates master academic course in the field of digital design and production techniques in architecture gain knowledge how to economically use the natural resources of Republic of Serbia.

They are fully aware of the position and responsibility of the designers of the future in promoting and implementing the principles of sustainable architecture and urbanism.

Special attention is paid to the development of skills for teamwork and the development of professional ethics.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Digital Techniques, Design and Production in Architecture and Urban Planning

Standard 05. Curriculum

Master studies curriculum for Digital Techniques, design and production of architecture and urbanism is formed to meet all of our goals.

Through a series of elective courses offered, students have the opportunity to meet their own research and design aspirations and continue their own professional development profile.

All courses are one semester and carry an appropriate number of ECTS points with one point corresponding to approximately 30 hours of student activities.

The curriculum is defined with description of each course that contains: the name, type of course,

academic year and semester, number of ECTS credits, name of the teacher, the course goal with expected outcomes, knowledge and competences, prerequisites for attending the course, course content, suggested readings, teaching methods, the method of assessment and evaluation, and other data.

The study program is harmonized with the European standards in terms of admission equirements, length of study, conditions of transition to the next year, graduation and modes of study.

An integral part of curriculum for Digital techniques, design and production of architecture and urbanism is a professional practice and practice for at 45 hours, which is implemented in the relevant scientific research institutions, relevant institutions dealing with the problems of design and construction in architecture.

Students complete studies developing a master work, which consists two inseparable parts. The first part consist research study - master, as a preparation / research necessary for a deeper understanding of the problem issue master work deals, and program defining of the project. The second part is the preparation and defense of Master paper, as a continuation of the first phase of research, which represents the architectural and / or urban design.

Before defense of master work, the quality of the completed work and its compliance with established quality system master works assessed a five-member committee, consisting of teachers and staff departments. Same commission review works from all candidates submit in one master term. If work gets positive review from committee, the candidate gains right to present master thesis and defense it. The final work will be presented and defended in front committee that consist at least three teachers with at least one must be from another department or faculty. The final score for master work is performed on the basis of evaluation of theoretical and methodological and the design part, as well as the presentation and defense.

1. Educational goal:

Learning basic software tools and programming skills in the means of solving various problems applied in architecture and urban planning.

2. Educational outcomes (acquired knowledge):

To apply acquired knowledge in the further educational process and professional work.

3. Course content/structure:

Introduction and definition of the term digital design in architecture and urbanism. History and theory of using computer algorithms and programming in visual arts, architecture and urbanism. Examples of the application of digital design in architecture. Parametric, generative, interactive and performance based design. Solving geometric, architectural spatial installation problems using Processing programming language or using software tools that support parametric and generative design (Rhino/Grasshopper).

4. Teaching methods:

Lecture to be held in amphitheater or computer laboratory, exercise in the computer laboratory. During exercises, a student is required to do practical oriented tasks. Knowledge check is conducted through an exam, where a student is obliged to do and apply one of the given problems. Examination task can be related to the task from the course from elective position 3.

1. Educational goal:

Enabling the students to to generate and visualize architectural scene by using various digital techniques.

2. Educational outcomes (acquired knowledge):

To apply acquired knowledge in the further educational process and professional work.

3. Course content/structure:

Visual perception and visualization. Advanced techniques in graphics processing digital images. A critical study of architectural visualization types by purpose and manner of presentation. Examples of different approaches to modeling and representation in relation to the different goals of presentation. Techniques visualization, animation techniques, video post-production techniques, real-time Web3D, Quick Time VR scenes. Optimization of presentation for the web and auditory display. The application of software tools for preparation of presentation: 3ds Max, V-Ray, Adobe After Effects, Adobe Dreamweaver.

4. Teaching methods:

Lecture exercises to be held in computer laboratory. Consultations. Parts of the subject that form logical units are to be examining in two tests. Tests are performed in the computer lab. A student has gained the conditions for the next test if in the previous acquires at least 30% of the points. For a student to pass the exam, in addition to other requirements, he or she must have at least 30% of the points from each of two tests. Exam result is based on attendance of lectures and exercises and test rates.

1. Educational goal:

Enabling the students to make physical models of complex forms generated from digital 3D models by using various digital techniques.

2. Educational outcomes (acquired knowledge):

To apply acquired knowledge in the further educational process and professional work.

3. Course content/structure:

Introduction and definition of the concept of production and digital fabrication in architecture. History and theory of application of 3D models in order to generate architectural models and architectural structures. Geometric principles and strategies of 3D modeling in relation to the different tasks of creating physical models. Techniques for 2D and 3D CAM fabrication. The logic of the 3D model production for CNC (Computer Numerical Control) digital

fabrication process. The logic for creating 3D models (Rapid Prototyping) for digital fabrication process. Examples of making physical models generated from 3D

digital models in relation to the use of different digital fabrication techniques. The properties of materials used for digitally generated physical models.

4. Teaching methods:

Lectures and exercises in the laboratory for modeling and digital fabrication. Consultation. Teaching consists of 3 segments: the theoretical part, demonstration and development of two digitally fabricated models. In the theoretical part the various techniques of digital fabrication and the role of geometry and materials in its construction are described. 2 tasks are performed on exercises. On the first task students work independently, and the second task was designed for work in a team with up to 5 members. Topic can be associated with other subjects such as parametric modeling or generative design in which digitally generated form is defined. 2nd task may be related to the interactive systems, where digitally fabricated model makes structural system capable of changing forms as a response to environmental influences. The course has no formal final exam and is considered to be successfully completed if the student through independent and team work successfully completes planned tasks

1. Educational goal:

Mastering basic programming skills used for solving various geometrical problems applied in architecture.

2. Educational outcomes (acquired knowledge):

The outcome of the course is to master the technique of programming or scripting in one of the offered programme or scripting languages in order to solve complex geometric and / or dynamic problems applicable in the architecture, as well as creating student's own tools for modeling

that do not exist in the software packages for architects.

3. Course content/structure:

Introduction and definition of the concept of generative design. History and theory of using computer algorithms and programming in architecture. Examples of the application of algorithms and generative modeling in contemporary architecture: space tessellation using different geometric models, L-systems and shape grammar, multi-agent systems and cellular automata in architecture. Solving architectural and geometric problems by writing

scripting or programming in one of the listed languages: MAXScript, rhinoscript, VBScript, VB.net or C #

4. Teaching methods:

Teaching is conducted through lectures and computer exercises. During the exercises the student is required to do practice-oriented tasks.

Knowledge check takes place through the exam, where student is required to do the practical application of a given problem.

1. Educational goal:

Training students in solving interactive and dynamic architectural problem by using mechatronic and embedded systems.

2. Educational outcomes (acquired knowledge):

The outcome of this course is to master the process of selection and use of mechatronic systems and embedid applied to architectural task.

3. Course content/structure:

Introduction and definition of the concept of interactive systems in architecture. Introduction to the basic concepts in the field of interactive systems, mechatronics and embedded systems. During the course, students learn to 1: identify the problem, 2: create the conceptual design of an architectural problem 3: identify the most suitable mechatronic or embedded systems 4: configure the whole mechatronic and embedded systems, program it for that purpose, test and eliminate errors detected 5: integrate mechatronic and embedded systems in architectural problem 6: compile all the documentation 7: follow predefined deadlines for each phase of work 8: during the entire process of applying a professional approach and a high level of ethics

4. Teaching methods:

For each school year the architectural task is defined. It has to be solved by the creating and using of interactive systems. Students are divided into teams of up to 5 members who carry out a given task. Students divide themselves into teams. Each team aims to implement a predefined architectural interactive task. The course has no formal final exam and is considered to be successfully completed if the team successfully designed and implemented an interactive system in a given task.

Lectures:	Practical	classes:	Other teaching types:	Study research work:	Other classes:					
2)	2 0 1							
Precondition courses			None							

1. Educational goal:

Enabling students for using technologies for web content making and introduction to the principles of web design.

2. Educational outcomes (acquired knowledge):

Students are trained to work independently in the field of complex web content formation.

3. Course content/structure:

Basic technologies for Web Design: HTML, XHTML, CSS. Characteristics of Internet network and HTTP protocol. Multimedia types of data on the web. Streaming. Usability of web site: web page design, content design, site design. Presentation for people with special needs. Multilingualism and localization of content. Making presentations in some of the software packages Adobe Dreamweaver and Adobe Flash.

4. Teaching methods:

Consultation, computer exercises, lectures.

Digital Techniques, Design and Production in Architecture and Urban Planning

Table 5.2 Course specification

Course:										
Course id:	AD0009		Complex Timber Structures							
Number of ECTS:	5									
Teacher:		Kočetov-	očetov-Mišulić Đ. Tatjana							
Course status:		Elective								
Number of active tea	ching classe	es (weekly)							
Lectures:	Practical	classes:	Other teaching types:	Study research work:	Other classes:					
2	()	2	0	1					
Precondition courses	 }	None								

1. Educational goal:

Mastering the knowledge necessary for solving architectural design problems in materialization of complex structural forms in timber and wood based products.

2. Educational outcomes (acquired knowledge):

Achieving competencies for application of acquired knowledge in design and shaping of complex form timber structures.

3. Course content/structure:

Modern timber and wood based materials. Innovative production and processing technologies. Achievements of modern wood technologies and 3d design in architecture. Genesis of linear timber structural systems into spatial timber structures with complex forms. Shaping of basic linear and planar structural elements in bearing structures of complex forms and in different structural systems. Joints and connections, industrialization of production. Significance and role of wood based panels in complex form structures. The role of software in dynamic simulation of complex form timber structure, prediction and control of bearing capacity and stability. Case studies – illustrations with realized projects and critical discussion from aesthetic and designers point of view.

4. Teaching methods:

Course is taken trough lectures, computational tasks and tutorials. Checking of accepted knowledge level is trough realization of model project (individually or in team), with theoretical description and defense of applied solution. Model project implies and includes synchronized materialization in wood of tasks related with subjects: "Digital fabrication and production in architecture", "Parametric modeling in architecture and urbanism" or "Advanced techniques of digital fabrication and production in architecture".

Precondition courses

1. Educational goal:

The goal of this course is to introduce students to the theoretical principles of modern methodologies in architectural design. Students will learn about the philosophical directions of the end of the 20th century and the way they influenced the creation of the evolutional dynamic systems, morphogenetic principles of the creation of form and the application of these principles in the field of contemporary architectural and urban design

2. Educational outcomes (acquired knowledge):

In this course, students are trained to solve complex, functional and formal problems in the field of architecture and urbanism. Students will be using modern methodologies in the design process to develop analytical thinking and the ability to expand knowledge in solving the complex problems of the built environment. Also students will be familiar with the optimization process and evolutionary systems and potential applications in the design process.

3. Course content/structure:

The basic principles of modern methodologies in the design process-philosophical ideas; Algorithm / chart as a starting point; Using of contemporary methodologies in architectural and urban design; Application of modern techniques and technologies to architectural and urban design; Application of adaptable systems to the problems in the field of architecture, urbanism and urban planning-programming, functional, structural aspects. Top down / bottom up process, Finding Form / form making, Emergence. Complex adaptable systems without central coordination. Evolutionary Systems / morphogenesis. Biomimicry. Digital morphogenesis

Knowledge evaluation (maximum 100 points)

1. Educational goal:

Within the course students will be presented with the theoretical and methodological assumptions of contemporary urban studies aimed at considering the complex processes of urban areas within the overall spatial and social context. Dominant issues of the development of the contemporary cities will be treated with a critical approach, analysis of relevant theories, as well as by analyzing urban spaces in which a variety of influential forces are materialized.

2. Educational outcomes (acquired knowledge):

Students will be trained to develop proper analytical and critical apparatus that will be able to adapt to the specifics of their own scientific research and practical work. Students will be directed towards the understanding of urban transformations as the results of the process that cause them.

3. Course content/structure:

Transformation processes of contemporary cities - the wider context; Modern concept of urban, Contemporary theories of urban growth and development; Specific themes and processes in the development of cities - critical analysis, spatial parameters as key factors of urban transformation - theoretical and practical considerations, the concept of vertical urbanism in theory and practice; Cities of the future; Modern technology as the tool of urban design and city development.

4. Teaching methods:

Lectures, Practice in Design, Consultations

Course grade is formed based on the lecture and practice attendance, success at colloquiums, written and oral examination.

1. Educational goal:

Enabling students for spatial visualization and spatial model generation in architecture.

2. Educational outcomes (acquired knowledge):

Use of graphic programs for 3D visualization, and a good perception of space.

3. Course content/structure:

Graphical programming systems and models. Ways of presenting information. Simulation and animation. User interface. The structure of software systems for spatial design. Recording facilities. Representation of projection and views. The classic looks. Orthogonal and Axonometric projections. Perspective. Design of computer views. Camera movement. Forming curves and surfaces. Changes in the shape of objects. Global shape changes. Changes in free form. Spatial transformation. Configuring space. 3D modeling, development process of solid and wire architectural models of three-dimensional objects using a specialized software. Modeling process: using polygons and NURBS. Representation. Setting the scene: arranging virtual objects. Preparation and analysis of materials. Creating materials. UVW mapping. Basics of light and shadows. Exterior and interior lighting. Photometry of lights. Determination of the distance from camera to image plane. Fractals. Sketching: 3D scenes, setting the scene: the eye point and the image plane. Sketching as a basis for the animation. Basics of animation and its application in architecture. Dynamics in computer graphics. 3D rendering, Mental ray rendering, generating a two-dimensional image-results. Application of Fly-through animation in architecture.

1. Educational goal:

Enabling students to use basic computer application software for representation of a wider physical environment.

2. Educational outcomes (acquired knowledge):

To apply acquired knowledge in the further educational process as well as in the future professional development.

3. Course content/structure:

Introduction, defining and explaining wider glossary of geoinformation technology. Fundamentals of GIS: differences from related systems, application and history. Principles of GIS: data structure about Earth, mapping, basic concepts and characteristics of GIS, how GIS operates and system architecture and components. Application of GIS: GIS data base structures, raster and vector models of data base, ``object`` data base, data collection and storage in GIS, analysis and presentation of collected data. Future of GIS. An Overview of leading GIS software.

4. Teaching methods:

Lectures and Practice in the computer laboratory. Consultations.

Part of the course which represents a logical whole is to be passed in four colloquiums. Colloquiums are done in the computer laboratory. Students may take the next colloquium if he/she won at least 30% of the points at the previous colloquium. In order for the student to pass the examination, he/she has to win at least 30% of the points at each of the four colloquiums besides other prerequisites. Course grade is formed based on the lecture and practice attendance and success at the colloquium.

1. Educational goal:

Introduction to the basic theories and conceptual frameworks that define the emergence of architectural works. Reviewing the relationship of architecture and the wider social and cultural context. The evaluation and assessment of the interaction of different levels and layers of existing space, particularly in terms of protection, programs, proportion, transport, environment, typology...Development of synthesis opinions about architecture. The establishment and development of critical observation, study, analysis and evaluation of architectural structures.

2. Educational outcomes (acquired knowledge):

Ability to act individually or in a team in the field of architecture theory and criticism.

3. Course content/structure:

Theories and conceptual frameworks in architecture. The problem of the role, position, identity and potential of architectural structures. Types and forms of architectural structures (the structures, projects and studies, competition projects, ephemeral and spatial structure, texts and publications ...). Forms of action in architecture (design and construction, history, theory and criticism, education, communication in architecture ...). The program in architecture as well as theoretical and phenomenological question. Architectural form content, function and meaning. Architectural language - reading and writing. The concept and theory of criticism. Types of critical texts. Analytical theoretical frameworks. Ways of writing critical text.

4. Teaching methods:

Lectures; Practice; Workshops. Term paper and oral examination.

1. Educational goal:

Education in the field of methods for the generation of digital spatial models from photographs, and training students to use basic IBM computer application.

2. Educational outcomes (acquired knowledge):

To apply the knowledge gained in the process of further education as well as in their future professional work.

3. Course content/structure:

Introduction, definition and clarification of basic terms of image-based modeling. Visual perception. Theories of perception and space understanding. Stereoscopy and perspective relationships. The relationship between perspective images and photos. Systems and methods for image-based modeling. Single-image-based modeling. Photogrammetry, arial and terrestrial. Image-based modeling of architectural structures. Te extraction of attributes and repetition. Image-based modeling of the built environment. Complex projects and simultaneous use of different approaches.

4. Teaching methods:

lectures and exercises in the computer lab. Consultation. Part of the material that make up the logical units are placed in the two colloquies . Colloquies are done in the computer lab.

To pass the exam, in addition to other requirements, student must have at least 30% of points from both colloquies. Exam evaluation is based on attendance of lectures and practice, and the success of the colloquia.

1. Educational goal:

The goal of this course is to acquire basic knowledge in the field of analysis and simulation object performances in relation to different influences from environment/ surroundings.

2. Educational outcomes (acquired knowledge):

The outcome of this course is to master the basic function of digital tools in design based on analysis of performance.

3. Course content/structure:

Introduction and definition of the concept design based on the analysis of performance. History and theory of application design based on the performance analysis in architecture. Examples of application of acoustic analysis, insolation, solar radiation, thermal analysis, CFD analysis, and visual accessibility. Application of evolutionary algorithms in function optimization of architectural design. Application software packages dynamic analysis and simulation performance: Ecotect and Ansys. The application of software tools that support the application of genetic algorithms in architectural design process: Grasshopper-Galapagos.

4. Teaching methods:

Teaching is conducted through lectures and computer practice. During practice, student is required to do practice-oriented tasks. Knowledge evaluation takes place through the exam, where the student is required to do practical application of given problem.

1. Educational goal:

The goal of this course is to acquire adequate knowledge in various fields of geometry of curves and surfaces (synthetic projective, differential, algebraic, descriptive) and to their generation and visualization.

2. Educational outcomes (acquired knowledge):

The outcome of course is to have a basis for the generation of curves and surfaces, and their geometric transformations, using appropriate software to create the desired function of spatial forms.

3. Course content/structure:

The basic elements of flat and spatial curves. Tangent, principal normal and binormal. Osculate, normal and rectification plane. Torsion and radius of torsion. Touch of curves. Analytical and synthetic defining curves. Generation of curves using transformations (perspective, projective, birational, general). The basic surface elements. Tangent plane and normal to the surface. Envelope and surface plane. Principal curvatures and principal directions of the surface.

4. Teaching methods:

Teaching is conducted through lectures, computer practice and consultations. Knowledge evaluation takes place through the exam, where the student is required to do and practically implementati of a given problem.

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Digital Techniques, Design and Production in Architecture and Urban Planning

Standard 06. Programme Quality, Contemporaneity and International Compliance

The study programme is consistent with the modern world scientific developments and the status of the profession, and comparable to similar programmes in foreign higher education institutions. The study programme in the field of Digital design in Architecture is designed to be complete and comprehensive and offers students the latest scientific and technical knowledge in this field.

The study programme in Digital techniques, design and production in Architecture is comparable to and in compliance with:

- 1. The Master of Advanced Studies in CAAD, ETH, Zurich http://www.mas.caad.arch.ethz.ch/
- 2. Master in Advanced Architecture, Institute for Advanced Architecture of Catalonia, Barcelona http://www.iaac.net/educational-programs/master-in-advanced-architecture-2
- 3. MSc Adaptive Architecture and Computation, The Bartlett School of Architecture London http://www.bartlett.ucl.ac.uk/graduate/programmes/postgraduate/mscdiploma-adaptive-architecture-and-computation

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Digital Techniques, Design and Production in Architecture and Urban Planning

Standard 07. Student Enrollment

Faculty of Technical Sciences, in accordance with social demands and its resources, enrolls certain number of students to the Master academic studies Digital techniques, design and production in Architecture, as budget financed or self financed students, which is defined by the special decision of the teaching and research faculty council and the founder. Student selection and enrolment of the applied candidates is based on their success in the previous education and entrance examination defined by the Rules of student enrolment to the study programmes.

Students from other study programmes, as well as individuals who completed different under Master academic studies that are worth at least 240 ECTS may enroll to this study programme, which is defined by Regulations on student enrollment in academic courses.

Thereby the Evaluation Committee (consisting of the department chefs participating in the realization of the study programme and the manager of the study programme) evaluates the passed examinations and other student activities relevant for the enrolment, and based on the recognized number of credits determines whether the student may enroll to the Master academic studies.

Candidates who, in the opinion Evaluation Committee, have completed an appropriate study program are eligible to enroll in the master studies. Evaluation Committee decides whether the candidates who are eligible to enroll have to take entrance exam. If Evaluation Committee make a decision on taking the entrance exam, the candidates take the exam: Testing knowledge in the field of the study program. The final ranking listof the candidates for enrollment is formed based on success in previous studies, the duration of the study and achieved success on the entrance exam, as defined by the Regulations on student enrollment in study courses.

Committee, in accordance with Regulations on student enrollment in the study programs, has the right to approve the registration of candidates who have not completed the appropriate basic academic courses in duration of four years, worth a minimum of 240 ECTS, and only in the case of vacancies remain after the registration of all candidates who meet the requirements set forCompetition (appropriate baseline studies, passed the entry exam). Candidates who, according to the professional judgment of Committee, have not completed the relevant study program of undergraduate studies may be approved enrollment if they pass the entrance exam. In this case, Committee determines, for each candidate separately, differences in the courses from basic academic studies that candidate should pass. Sum of ECTS cases defined by the difference can not exceed 30 (thirty).

The members of the Evaluation Committee are the manager of the study program, the heads of all departments to which subjects from a given study program belong, or teachers determined by the heads of departments, in accordance with the Regulations on student enrollment in courses.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Digital Techniques, Design and Production in Architecture and Urban Planning

Standard 08. Student Evaluation and Progress

The evaluation of students is performed by continual monitoring of students' accomplishments and the points obtained in fulfilling prerequisites and taking examinations.

The students master the study programme by taking examinations and thus obtaining a certain number of ECTS credits, in accordance with the study programme of Master Academic Studies. Each course at the study programme has a set number of ECTS credits which students obtain on

successfully passing the examination. Number of ECTS credits is determined based on student workload while working on certain subjects and applying a uniform methodology Faculty of Engineering, for all study programmes. Students' success in mastering a certain course is constantly

monitored during classes and is presented in points. Maximum number of points obtained in a course is 100. Students obtain points from a course through their work during classes, fulfilment of their prerequisites and taking the examination. The minimum number of points that a student can obtain by completing pre-exam obligations during the class is 30 and the maximum 70. Each course at the study programme has a clear and publicly known mode of obtaining points. The way of obtaining points during classes involves the number of points that students obtain through of each type of activity during classes or completing given prerequisites and taking exams.

Students final achievement at a course is presented using grades from 5 (fail) to 10 (excellent). A student's grade is based on the overall number of points obtained on fulfilling prerequisites and taking the examination, and in accordance with the quality of acquired knowledge and skills.

For a student to be allowed to take an exam, he/she needs to be awarded at least 15 ECTS credits in subject's prerequisites. Additional terms for taking exams are defined for each subject individually. Student's advancement during the studying is determined by Regulations for studying at Master Academic Studies.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Digital Techniques, Design and Production in Architecture and Urban Planning

Standard 09. Teaching Staff

For the realization of the study program – Digital Technique, Design and Production in Architecture and Urban

Planning, there is teaching staff with necessary professional and scientific qualifications.

The number of lecturers coincides with the demands of the study programme and depends on the number of

courses they lecture and the number of classes at these courses. The total number of teachers is sufficient to

cover the total number of classes on the study programme, so each teacher has an average of 180 active classes

(lectures, tutorials, practice classes, field classes) per year, i.e. 6 classes per week.

In order to improve lecture organization and the knowledge development of students, a certain number of visiting

professors from national and international universities give lectures to the students.

The number of associates corresponds to the needs of the study programme. Total number of associates at the

study programme is sufficient for the realization of total number of classes in the programme, so that the ssociates

have average 300 classes of active teaching annually, that is, 10 classes per week on average. A certain number of

external associates, whose professional work and competences additionally contribute to the student education,

are also engaged in lecturing.

Scientific and professional qualifications of the teaching staff relate to the educational and scientific field and the

level of their participation. Each teacher has at least five references from the narrow scientific or professional field

in which they lecture on the study programme.

The size of the lecture group is up to 32 students, practice groups are up to 16 students, and laboratory practice

groups are up to 8 students. No teacher has more than 12 classes per week. All data on teachers and assistants

(CV, selections, and references) are available to the public

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Digital Techniques, Design and Production in Architecture and Urban Planning

Standard 10. Organizational and Material Resources

To perform the study programme, the adequate human, spatial, technical and technological, library and other resources suitable to the study programme features and predicted students' number are provided. Classes on the study programme Digital Design, Techniques and Production in Architecture and Urbanism are held in such a manner so the minimum of 2 m2 of space is provided per student. Lectures are held in amphitheatres, classrooms, computer and specialized laboratories. The specialized library of the Department for Architecture and Urban planning has over 3000 bibliographical units relevant for

the study programme Digital Design, Techniques and Production in Architecture. There is also adequate equipment for all courses with

the appropriate textbook literature, devices and supplementary equipment available on time and in a sufficient

number for normal performance of the teaching process. Thereby, the adequate information technology is also available for performing the study programme.

Faculty has the library and the study room and provides a seat for each student in amphitheatres, classrooms and laboratories.

Study Programme Accreditation

Digital Techniques, Design and Production in MASTER ACADEMIC STUDIES Architecture and Urban Planning

Standard 11. Quality Control

Estimation of the study programme quality is elaborated regularly and systematically via self-evaluation and external quality control. One should place an emphasis on the multi-decade practice of students' surveys.

Study programme quality control is elaborated in the following manners:

- Surveying students at final lecture from the given course.
- Surveying students on the quality of the study programme and logistic support to the studies in the event of awarding the Diploma. Also, the studying comfort (classroom cleanness and tidiness) is evaluated
- Surveying the teaching and non-teaching staff on the quality of the study programme and the logistic support to the studies. This survey evaluates the work of the Dean's office, Registrar's office, library, and other services at the Faculty. Furthermore, the studying comfort (classroom cleanness and tidiness) is also evaluated.

To monitor the quality of the study programme, there is also a committee with all heads of all Departments participating in the realization of the study programme, together with a student from each study group. Members of the Committee for Quality Control are listed in Table 11.1.
