Study Programme Accreditation

MASTER ACADEMIC STUDIES

Software Engineering and Information Technologies

Standard 00. Introduction

The study programme of the Graduate Academic Studies – Master in Software Engineering and Information Technologies is a continuation of the undergraduate academic studies of Software Engineering and Information Technologies. The study programme is realised at the Department of Computing and Control Engineering of the Faculty of Technical Sciences, University of Novi Sad.

Master study programme of Software Engineering and Information Technology is designed to educate the engineers - masters of software engineering that will get plenty of theoretical and practical knowledge for the development of complex software components and systems in domain specific areas (for example: mechanical engineering, economics, environment protection, education, public administration, e-business, etc.), and at the same time is a base for further education at the appropriate specialist, or doctoral level.

The increasing need for the development of complex software for specific domain applications imposes the need for a professional profile that, in addition to general technological and methodological knowledge in software engineering, possess specific domain knowledge in the field of software applications that are being developed. Therefore, the structure and content of the program of study designed to answer this need, and to enable students to gain a solid knowledge of the domain area you want to specialize.

During the course of the study emphasis is on development of students ability to solve problems. Ability to work autonomously as well as capacity for teamwork is specially appreciated, and you are encouraged to participate in a real professional and development projects within individual laboratories, or in conjunction with software houses. Through all the above mentioned activities in addition to the necessary theoretical and practical knowledge, the necessary sense of personal security and fulfillment is developed - that is necessary for successful integration into a professional environment.

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Software Engineering and Information Technologies

Standard 01. Programme Structure

Name of this master - academic study program is Software Engineering and Information Technology. Academic title acquired upon successful completion of study programme is by the Software engineer - Master of Software Engineering. The structure of the program makes it possible to obtain deep knowledge of specific domain areas of application of software engineering and modalities of combining them with the methodological aspects of software development. In doing so, the student gains knowledge and qualifies for individual use of expert literature in specific domain area, can develop complex software applications. Knowledge acquired through this programme allows for application of this knowledge to develop software for solving domain specific problems, and provide base for further studies, if student choose to do so.

Admission requirements are the completion of the undergraduate studies worth at least 240 ECTS, and successful completion of entrance examination - if number prospective candidates is larger than number of vacancies. Entrance examination is on the field of Software Engineering and Information Technology, and is awarded with maximum of 60 points. Minimum required points to successfully pass the entrance examination is 14. Procedures for registration, ranking and enrolling of applied candidates are defined in the Regulations of student enrolment on study programmes.

Master academic studies of Software Engineering and Information Technology lasts year, and the student chooses a variety of courses related to domain specific application field of software engineering. Student must choose courses in specific domain that brings at least 70% of total ECTS points. of the loan from the domain field. The seniority in choosing the domain field is awarded to the best students, and the management of the study program has the ability to limit the number of students per group for the rational use of existing resources.

Classes are organized in the form of lectures and exercises. During the teaching process the emphasis is put on independent research and student work as well as its increased personal involvement in the educational process. Lectures, with the use of appropriate didactic resources, exposes the material provided, but on this occasion the students are also pointed towards research trends in the relevant area. On exercises, which follow the lectures, specific tasks are solved and examples that further illustrate the material are mastered. Exercises also provide additional explanations of the material. The exercises can be auditory, laboratory, computer or computing. Number of exercises can be performed in software companies or other institutions.

Elective courses are selected from the pool of proposed courses, but students have the option, according to their own preferences and desires and with the approval of the Chief of the study program, to choose a number of courses within FTN, UNS, or any other university in the country or abroad. In doing so, preconditions that are prescribed for attendance of the selected course must be met.

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Software Engineering and Information Technologies

Standard 02. Programme Objectives

The purpose of this graduate study programme is the education of students for the profession of software engineering in the field of computing in accordance to the needs of the society and the individual. Software Engineering and Information Technologies study programme is designed to ensure the acquired competences which are justified and useful for the society. The Faculty of Technical Sciences has defined the fundamental tasks and aims in educating highly competent professionals in the field of engineering. The purpose of the Software Engineering and Information Technologies graduate study programme is in accordance with the basic tasks and aims of the Faculty of Technical Sciences. Realization of the thus structured study programme educates software engineering and information technologies engineers competent at the European and international level.

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Software Engineering and Information Technologies

Standard 03. Programme Goals

The objectives of the study programme can be classified in the following categories:

Technical knowledge: The programme ensures the in -depth knowledge of at least one of the specialization areas – domains of application of software engineering.

Practical knowledge: Acquiring the necessary knowledge for defining problems and projects as well as plans for their resolving using different technical knowledge and skills. This, among other things, includes the development of creative ways of approaching problems and the ability of critical thinking.

Communicative skills and team work. Acquiring the necessary knowledge and skill in at least one world language with the ability to present one's results to the professional and wider audience as well as developing the team work skills.

Preparation for further studies: Acquiring the necessary knowledge which will enable the continuation of student's education at specialization or doctoral level. A specific aim which is related to the objectives of the education at the Faculty of Technical Sciences is developing the students' awareness of the need for life long learning, development of society as a whole and environment protection.

Preparation for professional involvement: Acquiring the necessary knowledge and developing awareness of the wide array of problems and obligations related to professional practice: safety, ethics, ecology and economy.

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Software Engineering and Information Technologies

Standard 04. Graduates` Competencies

Students with Master`s degree in Software Engineering and Information Technologies, who have completed the study programme, have the competence to solve real life problems in practice as well as to continue education if they decide to do so. Their competences include, primarily, critical thinking, the ability to analyze a problem, synthesize a solution, predict the behaviour of the chosen solution with the clear idea of the advantages and disadvantages of the chosen solution.

Mastering this study programme the students acquire an in depth knowledge of one application domain for software engineering, as well as applicable knowledge of general methodological principles of software engineering. The study programme qualifies students for solving practical problems using professional and scientific methods and procedures.

The students who have completed Software Engineering and Information Technologies Master programme are capable of adequately writing about and presenting the results of their work.

The students who have completed this level of studies have the competence to apply their knowledge in practice and follow the new developments in their profession as well as cooperate with local community and international environment. Students with Master`s degree in Software Engineering and Information Technologies are capable of team work and development of professional ethics.

As a rule, the competence of students is additionally verified through at least one paper presented at a national conference on the topic of the Master thesis.

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Software Engineering and Information Technologies

Standard 05. Curriculum

Curriculum of the master academic studies of Software Engineering and Information Technologies has been formed to meet all targets. The structure of the study program ensures that elective courses are represented with at least 30% of the credits.

At master academic studies students develop knowledge in the field of software engineering and specify them on the specific domain areas, which are electives chosen through a reconciliation with their affinities for certain domain areas.

All courses last one semester and are awarded with corresponding number of ECTS credits - whereby one credit corresponds to approximately 30 hours of student activities.

The curriculum contains a description of each course that contains the name, course type, year and semester, the number of ECTS credits, teachers, the goal of the course to the expected outcomes, skills and competencies, prerequisites for attending, content items, reading materials, teaching methods, method of verification and evaluation, and other information.

The study program is compliant with the European standards in terms of conditions of entry, duration of study, the conditions of transition to the next year, graduating and modes of study.

An integral part of the curriculum of Software Engineering and Information Technology is a professional practice and practical work for 45 hours, which is realized in the relevant scientific research institutions, in organizations with innovative activities, or in organizations for providing infrastructural support for innovative activity in companies and public institutions.

Student completes studies by creating a master thesis that consists of a study of research, theoretical and methodological preparation necessary for a deeper understanding in the field of the master thesis, and writing the thesis.

Prior to the defense of the master thesis, candidate takes the exam on theoretical and methodological foundations before the Commission which is designated for the defense. The final assessment of the master thesis is based on the assessment laid the theoretical and methodological preparation and evaluation completion and defense of the work itself. Final thesis is before a panel consisting of at least three teachers with at least one must be from another department or college.

As a rule, the student is expected to publish at least one paper at national conferences in the area of final master work.

Table 5.2 Course specification

Course:		Electronic Payment Systems				
Course id:	E2501					
Number of ECTS:	6					
Teachers:		Sladić S. Goran, Vidaković P. Milan				
Course status:		Elective				
Number of active teaching classes (weekly)						
Lectures:	Practical classes:	Other teaching types:		Study research work:	Other classes:	
3	0	3		0	0	
Precondition courses		None				
1. Educational goal:						
Students learn about the models and technologies for electronic payment systems. They gain the knowledge and skills to design the maintenance electronic payment systems.						
2. Educational outcomes (acquired knowledge):						
After successfully completing the course students are able to apply the principles, technologies and standards in the field of electronic payment systems. They are able to design and implement electronic payment systems, and improve existing electronic payment systems.						
3. Course content/structure:						
Payment system: organization, payment instruments, domestic and international payments, financial exchange network (TARGET, SWIFT), electronic payment system. Payment cards: types, payment cards associations, standards. Magnetic card: standards, structure, content, use, PIN codes, attacks on the card. Smart Cards: structure, types, standards, organization, modules, file system, keys, communication with card, Java smart card, attacks on the card. EVM standard: purpose, organization, smart card file system, data representation, EMV transactions. Online payments: general features, PayPal, Google Checkout, 3D Secure. Mobile payments: mobile payment systems, payment models, mobile EMV standard, Google Wallet. Fraud in electronic payment systems: online scams, evolution of fraud management and prevention of fraud, techniques for the fraud prevention.						
4. Teaching methods:						
Lectures, computer practice classes, consultations. The exam is oral. The final grade is formed on the bases of the laboratory practice and oral part of the exam.						
Knowledge evaluation (maximum 100 points)

1. Educational goal:								
The aims of the course are: provide students with the knowledge of important concepts and techniques of data mining; make students capable of applying of data mining methods, tools and techniques.								
2. Educational outcomes (acquired knowledge):								
Students are acquainted with the important concepts and techniques of data mining and capable of data analysis, predictive model creation, development and maintenance of data mining systems.								
3. Course content/structure:								
Basic concepts and overview of the field of DM. Exploratory data analysis and visualization. Basic techniques of classification: decision trees, naive Bayes method, k-nearest neighbors and support vector machines. Advanced classification techniques: the classifier ensembles, bagging, boosting, semi-supervised learning. Classifier evaluation, automatic determination of the parameter values ??and selection of attributes. Clustering techniques: k-means, hierarchical clustering, dbscan algorithm. Discovering association rules: apriori and FP-growth algorithm. Review of the application of data mining: analysis of business data, web data analysis, recommendation systems (films, books, etc.), predictions in sport.								
4. Teaching methods:								
Lectures, computer practice classes, consultations.								
The exam is oral. The final grade is formed on the basis of achievement on laboratory practice and oral exam.

1. Educational goal:						
Students gain knowledge of the concepts, techniques and selected examples of semantic web applications.						
2. Educational outcomes (acquired knowledge):						
The acquired knowledge enable the implementation of software systems which support intelligent selection, approach and processing of information on the Web.						
3. Course content/structure:						
Introduction: Structure syntax and semantics. Need for semantics on the Web. Meta-programming, meta-data, XML, XSLT, RDF. Semantics, Semantics and knowledge, Ontologies, Logics, Deduction, Domain modelling, Context, Distributed knowledge. Classification. Knowledge based protocols. Technologies. Ontology tools, Ontology software (API). OWL. SPARQL. Methodologies. Methodologies for ontology engineering. Methodologies for introducing knowledge management systems. Methodologies of developing semantic systems. Semantic systems. Semantic Web services. Semantic Web Portals. Semantic Wiki. Semantic Multi-Agent Systems. Semantic Web Browsers. Applications: bioinformatics, document management systems, information search, etc.						
4. Teaching methods:						
Teaching methods include: lectures, computer practice classes, homework assignments and consultations. During the lectures the content of the course is presented using the necessary didactic tools while student active participation is encouraged. The practical aspect of the course is covered at computer practice classes through assignments which students do independently or with the help of teaching assistants as well as through homework assignments (obligatory or optional). A student is expected to demonstrate the ability of independent task solving or understanding of the solution. The evaluation is in the form of oral conversation with the teaching assistant. The course lecturer and assistant have consultations with the students. During the consultations the students are given additional explanations of the material covered at the lecture and practice classes, and in case the consultations relating to independent work on laboratory or homework tasks, the suggestions are given on ho

Precondition courses					
None					
1. Educational goal:					
To teach students to design and implement software languages intended to be used in the specific domains (Domain-Specific Language – DSL) by using modern methods, techniques and tools.					
2. Educational outcomes (acquired knowledge):					
After successfully completing the course the student is able to: understand and effectively utilize the terminology and concepts of the subject area, apply methods and techniques for designing and implementing domain-specific languages??, identify the advantages and disadvantages of various tools for creating domain-specific languages??, analyze arbitrary domain of human activity and recognize the most important concepts and their interdependencies, based on analysis of the domain creates the abstract syntax of the DSL; utilize techniques to create different concrete syntax (graphical, textual, based on tables, dialogs, trees, etc..), identify the most appropriate syntax and implement it using the available tools, understand the impact of cultural and sociological profile of the user to the understandability of the concrete syntax, creates concrete syntaxes of a high degree of usability and readability by using knowledge about the human cognitive abilities.					
3. Course content/structure:					
Theoretical lectures: Basic definitions and concepts; difference between a General Purpose Language (GPL) and Domain Specific Language (DSL). External and internal DSLs. DSL as a set of coordinated models. History and development of DSLs; Traditional and modern notions of DSLs; Impact of DSL usage on productivity. Language Workbenches. Examples of DSLs. Domain analysis. Communication with domain experts; Techniques of recognition of key concepts from the domain description. Techniques of detecting the concepts relations. Abstract syntaxes, abstract syntax definition techniques, meta-modeling. Languages ??for meta-models definition (MOF, ECore, GOPRR, MoRP). Concrete syntaxes, concrete syntax definition, concrete syntaxes as the interfaces with the user, textual concrete syntaxes (EBNF, Xtext, Emfatic); graphical concrete syntaxes (GMF, Graphite, Spray, Eugenio); automated layouting; Language expressions definition using wizards; Tree-based syntaxes; table-based syntaxes; hybrid syntaxes, cultural and social aspects of creating highly usable and readable concrete syntax; framework of cognitive dimensions and impact of human cognitive abilities on the readability of language expressions. Secondary notation and its impact on the language expression comprehension. The semantics of the language; semantic constraints definition; semantic rules check. Interpreters; dynamic analysis and interpretation of language expression; optimization techniques. Translators - code generators; language expression analysis techniques and code generation for arbitrary target platform; Template engines. Coevolution of language; Horizontal and vertical coevolution; change propagation from higher to lower meta-level, propagation of changes within the same meta-level between the dependent statement. Practical classes: design and creation of DSL for a given domain. The division into project teams. Domain analysis. Extracting key concepts and their relationships. Creating language abstract sy					
4. Teaching methods:					
Lectures, Computer exercises; Consultation. Design and implementation of project assignment by working within project teams. At the end of the semester, public presentations of the most successful teams are organized with the discussion of the obtained results. The defense of project assignment is oral. The final exam is oral. Final grade is based on the score from the final exam and project defense.					
Knowledge evaluation (maximum 100 points)

Table 5.2 Course specification

Course:		Business Process Management					
Course id:	E2521						
Number of ECTS:	6						
Teachers:		Milosavljević P. Branko, Ivanović V. Dragan					
Course status:		Elective					
Number of active teaching classes (weekly)							
Lectures:		Practical classes:	Other teaching types:	Study research work:		Other classes:	
3		0	3	0		0	
Precondition courses							
None							
1. Educational goal:							
Understanding the concepts and systems for managing business processes. Gaining the knowlegde and skills for design and implementation of business process management systems.							
2. Educational outcomes (acquired knowledge):							
Upon successful completion of the course students are able to apply the concepts of business process management in software systems design and implementation, to specify and implement business processes, and to analyze, simulate and improve them.							
3. Course content/structure:							
The notion of workflow and business processes. Petri-nets, graphical representation and mathematical model. Extensions of Petri-nets. Modeling business processes. Triggers. Managing resources. Workflow nalysis and verification. Workflow patterns. Workflow simulation and testing. Business process management systems. Tools for monitoring and administration of business processes. Standardization in workflow systems.							
4. Teaching methods:							
Lectures; Computer practice. Consultations. The examination is oral. The final grade is formed on the bases of success at laboratory practice and oral examination.							
Knowledge evaluation (maximum 100 points)							
Pre-examination obligations		Mandatory	Points	Final exam		Mandatory	Points
Project		Yes	50.00	Oral part of the exam		Yes	50.00

1. Educational goal:								
Acquiring basic knowledge in the field of software quality and standardization, as well as the knowledge about creation and the use of standards and technical regulations, and also certification of systems, processes and software products.								
2. Educational outcomes (acquired knowledge):								
The need for the creation and the use of standards and quality metrics. Ability to design and establish standardization of software systems. Ability to manage software standardization. Licencing and certification of software system, processes and products.								
3. Course content/structure:								
The concept of software standardization and quality metrics. Goals and principles of software standardization and quality assurance. Basic parameters of software systems standardization and quality. Models of the software systems standardization and quality.								
4. Teaching methods:								
Lectures; Consultations. Software project.								
Knowledge evaluation (maximum 100 points)								
Pre-examination obligations			Mandatory	Points	Final exam		Mandatory	Points
Exercise attendance			Yes	5.00	Theoretical part of the exam		Yes	20.00

Teacher:	Kovačević D. Aleksandar					
Course status:	Elective					
Number of active teaching classes (weekly)						
Lectures:	Practical classes:	Other teaching types:	Study research work:	Other classes:		
3	0	3	0	1		
Precondition courses		None				
1. Educational goal:						
The aims of the course are: provide students with the knowledge of important concepts and techniques of decision support systems; make students capable of applying decision support systems methods, tools and techniques and to develop and maintain decision support systems.						
2. Educational outcomes (acquired knowledge):						
Students are introduced to the concepts and techniques of decision support systems (decision support systems, DSS). Students are capable of applying of techniques, methods and toolss in the area of decision support systems as well as for the design and maintenance of DSS.						
3. Course content/structure:						
Basic concepts of decision support systems (DSS). Decision theory. Systems theory, models and process modeling. Phases of decision making. Components of DSS systems. The organization of data, knowledge and models in the DDS system. Organization of the graphic user interface. Decision support systems hardware. DSS systems development methods. Modeling and analysis of DSS systems. Static models. Dynamical models. Risk management. Expert systems. Intelligent systems. Mining of structured and unstructured data to support decision-making. Machine Learning in DSS systems.						
4. Teaching methods:						
Lectures, laboratory exercises, consultations. The exam is oral. Exam score is based on the success of the laboratory exercises and the oral exam.						
Knowledge evaluation (maximum 100 points)

Course:		Identity Management				
Course id: SEM009						
Number of ECTS: 6						
Teacher:		Marković -. Milan				
Course status:		Elective				
Number of active teaching classes (weekly)						
Lectures:		Practical classes:	Other teaching types:		Study research work:	Other classes:
3		0	3		0	1
Precondition courses		None				
1. Educational goal:						
Students learn about the models and technologies for identity management.						
2. Educational outcomes (acquired knowledge):						
After successfully completing the course students gain the basic theoretical concepts of identity, identity management, and knowledge on the multidisciplinary nature of the identity management problem. They are able to design and establish identity management system in a small or medium organization.						
3. Course content/structure:						
Basic theoretical concepts of identity and identity management. Multidisciplinary approach: technical, legal, social, security and organizational aspects of the identities. Identity management approaches: core identity, user and service access. Identity management systems: directories, LDAP standards and meta-directories. Technical aspects of the identity management system implementation: Single Sign On, Kerberos, X.509/PKI. Identity Federation and SAML standard.						
4. Teaching methods:						
Lectures. Computer practice. Consultations. The examination is oral. The final grade is formed on the basis of achievement in the laboratory practice classes and oral examination.

1. Educational goal:					
Students learn about the methods and techniques for the modeling and implementation of information security within the different systems.					
2. Educational outcomes (acquired knowledge):					
After successfully completing the course the students are able to apply principles, methods and standards in the field of the information security. They are capable to implement information security management, security risk management, and to establish information security in organizations.					
3. Course content/structure:					
Introduction to information security: definition, fields of interest, basic concepts, development of information security. Requisites for information security: threats to information security, attacks on information systems, business, professional and ethical reasons for defining information security, legal framework. Information security standards: ISO 27000. Organization of information security: internal organization, external organization, resource management, physical and logical security, security incidents, business continuity. Information security management system: the concept of information security management systems and information security management, the scope of the system, user identification and resources, system design, policies, standards, procedures. Security risk management: fundamentals of risk management, risk identification, risk assessment, risk reduction, risk avoidance, strategies for risk control. Information security implementation: technical and non-technical aspects of implementation, defining security requirements, implementation of information security management, information security analysis, monitoring and maintenance.					
4. Teaching methods:					
Lectures. Computer practice. Consultations. The examination is oral. The final grade is formed on the basis of achievement in the laboratory practice classes and oral examination.

Precondition courses None						
1. Educational goal:						
Enabling students to design digital archives and document control systems.						
2. Educational outcomes (acquired knowledge):						
Students become familiar with the principles and techniques for the development of digital archives and document control systems. The student is able to design and develop digital archives and document control systems.						
3. Course content/structure:						
Digital archives: terminology, features. Document models: simple, structured, multi-lingual, multi-media. Models of document collections: centralized, distributed. Document filing. Searching document collections: searching models, query languages, indices, user interaction, implementation. Metadata and acquisition in distributed collections. Collaboration of users in document formation. Document flow control: models, implementation. Standards in the field of digital archives and document control. Document access control and DRM (digital rights management).						
4. Teaching methods:						
Lectures, Computer practice, Tutorials. The examination is oral. The final grade is formed based on the achievement at the laboratory practice and the oral examination.

Course:		Agile Software Development Methodology			
Course id:	E2508				
Number of ECTS:	6				
Teachers:	Milosavljević R. Gordana, Perišić R. Branko				
Course status:	Elective				
Number of active teaching classes (weekly)					
Lectures:	Practical classes:	Other teaching types:	Study research work:	Other classes:	
3	0	3	0	0	
Precondition courses					
None					
1. Educational goal:					
The objective of the course is to enable students to apply methods and tools for agile software system development and conduct a comparative analysis of the advantages and disadvantages when compared with the traditional approach. Fundamentals of modeling and realization of the generator code and applications.					
2. Educational outcomes (acquired knowledge):					
Students will acquire theoretical and practical knowledge necessary for the efficient application of the methods, techniques and tools for agile software system development. Agile software development, the design of tools for code generation based on abstract understanding of system functionality.					
3. Course content/structure:					
Approaches to agile software development. Methods and techniques of agile software development. Tools for agile software development. Code generators. The revision of the methodological approaches to software development (the relationship between the agile and traditional methods). The prototypical software development. Model driven architecture. Standardization of the functional and visual features of typical software systems and the design of software tools for design template generation.					
4. Teaching methods:					
The evaluation of knowledge is carried out continually during the semester in the form of checking the student's progress in a team project in a chosen software system. The project defense is public.					
Knowledge evaluation (maximum 100 points)

Course:		Protection and Recovery of Software Systems				
Course id:	E2509					
Number of ECTS:	6					
Teacher:		Perišić R. Branko				
Course status:		Elective				
Number of active teaching classes (weekly)						
Lectures:		Practical classes:	Other teaching types:	Study research work:		Other classes:
3		0	3	0		0
Precondition courses		None				
1. Educational goal:						
The objective of the course is to enable students to recognize the importance of complex software application, analysis, modeling and implementation of the authorization and protection mechanisms within complex software systems. Understanding the application of laws and regulations related to the protection and recovery of complex software systems.						
2. Educational outcomes (acquired knowledge):						
Identification, specification, modeling and implementation of protection and recovery mechanisms of complex software systems . After the exam has been taken and passed with success, students are able to design the mechanisms of protection and recovery within complex software systems and participate in the supervision and control of the computer system safety.						
3. Course content/structure:						
Terminology related to the protection, safety and security of software systems. Mechanisms and methods of authorization, protection and recovery of software systems. Modeling of protection mechanisms, design of protected software, dynamic configuration of software systems. Disaster recovery principles. Implementation of mechanisms of software protection and recovery. Standards and regulations in the domain of the protection of software systems. Discussing the responsibilities of all those involved in the process of the implementation of software protection and recovery.						
4. Teaching methods:						
The acquisition of knowledge happens gradually during the course and the students` work is evaluated through their achievement in a team project about the implementation of protection mechanisms within a chosen software system. The defense of team projects is public.						
Knowledge evaluation (maximum 100 points)

Course:		Software Configuration Management				
Course id:	E2510					
Number of ECTS:	6					
Teacher:	Dejanović R. Igor					
Course status:	Elective					
Number of active teaching classes (weekly)						
Lectures:	Practical classes:	Other teaching types:		Study research work:	Other classes:	
3	0	3		0	0	
Precondition courses						
None						
1. Educational goal:						
To make students capable of applying best practice, methods, techniques and tools in the domain of Software Configuration Management (SCM) with the emphasis on the SCM process introduction and improvement.						
2. Educational outcomes (acquired knowledge):						
At the end of the course students are capable of: introducing SCM best practice, methods and tools in the software development process, improve existing SCM process, analyze available tools and identify advantages and disadvantages of each, understand pros and cons of different version control systems, change management systems, build and release management systems, systems for managing alternative lines of development etc.						
By using modern SCM tools and by the development and documentation of SCM process and the development of supporting application, students acquire a broad range of practical skills.						
3. Course content/structure:						
Theoretical lectures: Basic definitions and historical development of Configuration Management - CM. Traditional notion of CM; Identification of configuration, change control, status accounting, audit and verification. Configuration management in the context of software development (Software Configuration Management - SCM). Source code management; Version Control System - VCS; architectures, advantages and disadvantages : social coding; repository models; concurrent change management models; alternative development courses. Dependency management. Build management, automation, tools. Change Management; Events; Requests for change tracking; support systems. Issue management; identification; traceability; automation. Deployment: identification, authentication, security, planning. Industrial standards and frameworks. Models of maturity. Practical classes: file compare tool patch and diff. Centralized version control systems (Subversion). Distributed version control systems (Git, Mercurial). Tools to support issue tracking (Trac). Code review (ReviewBoard, Rietveld, Gerrit, barkeep). Tools for automated build (Apache Ant + Ivy, Maven). Systems for continuous integration (Jenkins). The design and documentation of the SCM process in accordance with the recommended practice. Creating Web applications to support the proposed SCM process.						
4. Teaching methods:						
Lectures, Computer exercises; Consultation. Design and implementation of project assignment by working within project teams. At the end of the semester, public presentations of the most successful teams are organized with the discussion of the obtained results. The defense of project assignment is oral. The final exam is oral. Final grade is based on the score from the final exam and project defense.

Table 5.2 Course specification

Course:		Fuzzy Systems				
Course id:	E2511					
Number of ECTS:	6					
Teacher:	Obradović J. Đorđe					
Course status:	Elective					
Number of active teaching classes (weekly)						
Lectures:	Practical classes:	Other teaching types:	Study research work:	Other classes:		
3	0	3	0	0		
Precondition courses						
None						
1. Educational goal:						
Students become familiar with the concepts, techniques and chosen examples of the application of the fuzzy approach.						
2. Educational outcomes (acquired knowledge):						
Students acquire knowledge in the concepts taken from the fuzzy sets and fuzzy logic theory. Besides, they become familiar with certain approaches and methods of application.						
3. Course content/structure:						
Fuzzy sets. Fuzzy logic. Probability theory. Approximation decision making. Fuzzy aggregation operators, fuzzy relations, fuzzy clustering. Application in decision making, data search, shape recognition, control.						
4. Teaching methods:						
Lectures. Computer practice. Tutorial work.						
The practical part of the course is evaluated through laboratory work by solving obligatory tasks. Students are encouraged to do additional tasks at their own will as well. The tasks are graded. A part of the subject matter that forms a unit can be taken as a partial exam-colloquium (from 2 to 4). The partial exam is a part of the examination. The student can take the next partial exam only if they have gathered at least 30% of points at the previous partial exam. Partial exams are taken in the written form. The final part of the examination is an oral exam. The grade at the exam is formed by adding all the points a student has gathered during the course: by attending the lectures, completing the obligatory tasks, papers, passing the partial exams and the final examination.

Precondition courses		None			
1. Educational goal:					
Students gain knowledge of the concepts, techniques and selected examples of evolutionary computing and in particular, genetic algorithms.					
2. Educational outcomes (acquired knowledge):					
The acquired knowledge enable problem solving by using evolutionary computing approach.					
3. Course content/structure:					
Evolutionary algorithm. Genetic algorithms. Evolutionary strategies. Evolutionary programming. Genetic Programming. Hybridization with other techniques, memetic algorithms. Koevolution, interactive evolution.					
4. Teaching methods:					
Lectures, computer practice classes, consultations.					
The practical section of the course is evaluated in computer laboratory where students solve obligatory tasks. Students can also take optional tasks. The tasks are marked. Part of the course material which forms a logical whole can be taken as a partial exam – colloquium (2 to 4). A partial exam is a part of an exam. A student can take the next partial exam if he/she has attained at least 30% of points at the previous one. Partial exams are taken in written form. The final exam is taken in oral form. The final grade is formed on the bases of class attendance, obligatory tasks, assignments, partial exams and final exam grades.

Table 5.2 Course specification

Course:		Business Intelligence				
Course id:	E2527					
Number of ECTS:	6					
Teachers:		Kovačević D. Aleksandar, Nenadić M. Goran				
Course status:		Elective				
Number of active teaching classes (weekly)						
Lectures:		Practical classes:	Other teaching types:		Study research work:	Other classes:
3		0	3		0	0
Precondition courses		None				
1. Educational goal:						
The aims of the course are: provide students with the knowledge of important concepts and techniques of business intelligence and business analytics; make students capable of applying of business intelligence and business analytics methods, tools and techniques in order to improve the quality of business decisions.						
2. Educational outcomes (acquired knowledge):						
Students are acquainted with the important concepts and techniques of business intelligence (BI) and business analytics (BA) and are capable of applying business intelligence and business analytics methods, tools and techniques in order to improve the quality of business decisions.						
3. Course content/structure:						
Overview of the basic concepts of business intelligence. Collection, storage and integration of business data (data integration). Data quality management. The organization of knowledge in business systems (knowledge management). Exploratory analysis of business data, creating business reports and analysis, online analytical processing (OLAP) and visualisation. Introduction to the concepts and techniques of data mining for the analysis of business data and the creation of predictive models: classification, clustering, association rules, linear and logistic regression. Research and analysis of time series (time series mining). Complex event processing and data flow analysis (stream mining) - integrating and analysis of data from various sources: Web logs (web log mining), the analysis of clicks (click stream mining), stock, text, etc. in order to uncover opportunities or threats in making business decisions. Automatic detection of process models (process mining) - log analysis of business processes with the aim of automatic model detection. Analysis of the supply chains (supply-chain analytics). Automatic fraud detection in business systems. Decision support systems. Overview of Enterprise Resource Planning (ERP) systems. Analysis of multimedia data (multimedia mining). Text mining in business intelligence - information extraction from business reports; automatic identification of attitudes and emotions from text (opinion and sentiment mining).						
4. Teaching methods:						
Lectures, laboratory exercises, consultations. The exam is oral. Exam score is based on the success of the laboratory exercises and the oral exam.						
Knowledge evaluation (maximum 100 points)

1. Educational goal: Students learn about theoretical and practical bases of soft sensors.						
2. Educational outcomes (acquired knowledge): - knowledge in the field of soft sensors design; - knowledge about the applications of machine learning techniques for modelling the nonlinear processes in human body.						
3. Course content/structure: Soft sensors as a low cost alternative to expensive hardware devices. Soft sensors in parellel with hardware sensors allowing the realization of more reliable processes. The applications of machine learning techniques (neural networks, fuzzy logic etc.) for modelling the nonlinear processes in human body. Soft sensor design. Data selection. Choice of the model structure (static, dynamic, model order selection). Model validation. Strategies to Improve Soft Sensor Performance.						
4. Teaching methods: Lectures. Computer practice. Laboratory practice. Consultations.

1. Educational goal:					
The aim of the course is the detailed knowledge of the algorithms for solving optimization problems of SCADA systems.					
2. Educational outcomes (acquired knowledge):					
The outcome is competence to solve some optimization problems in SCADA systems.					
3. Course content/structure:					
Supervisory Control and Data Acquisition Systems (SCADA): definition, classification, basic characteristics, algorithmic problems and challenges; Graph Theory: Graph definition, basic concepts, types, search, system modeling using graphs; Basics algorithms based on graphs: a traveling salesman, graph partitioning, multilevel algorithms, graph coloring, dynamic algorithms (features, criteria), critical path. Examples of problem solving using algorithms based on graphs: the problems of transport and optimization of transport systems (airport, traffic lights, toll booths on the highway, courier, taxi), telephone exchange, computer networks, CPU load balancing in distributed SCADA systems, optimal workflow in NUS.					
4. Teaching methods:					
Teaching is conducted through the lectures and computer practice. Throughout the computer practice student is obliged to complete practically oriented tasks.

1. Educational goal:						
Students are enabled to design and implement the systems of virtual/augmentative reality.						
2. Educational outcomes (acquired knowledge):						
The acquisition of skills and knowledge necessary for the development of systems of virtual/augmentative reality with practical work experience with non-immersive devices.						
3. Course content/structure:						
Milgram real-virtuality continuum and the metrics of virtuality/augmenticity, the elements of VR systems, VR devices- the immersive and non-immersive class, 3D audio, 3D video and tactile devices, the techniques of body, head, limb and eye monitoring, VR/AR interactivity, the techniques of programming VR systems with examples (VRML, X3D, Cortona SDK), examples of VR systems, systems of augmentative reality, the basic AR system architecture, examples of AR systems, the basic concepts of ubiquitous computing systems.						
4. Teaching methods:						
Lectures, computer practice, tutorial work. The subject matter is organized into two units which are evaluated through 2 tests during the course. In the computer practice classes students will use programs (DirectX/OpenGL/X3D) or the up-to-date authoring system to develop simple VR/AR environments with non/semi/immersive devices. Successfully completed practice is the requirement that has to be met before taking the examination. The examination is taken in the written form. The points gathered at the exam, tests and computer practice are added, forming the final grade.

Precondition courses		None			
1. Educational goal:					
Students learn about principles, techniques, and methods of lossless and lossy data compression.					
2. Educational outcomes (acquired knowledge):					
Acquiring the basic knowledge in data compression. The acquired skills are used for development of software that uses binary data, text, image, video compression.					
3. Course content/structure:					
Data compression principles and techniques. Huffman coding. Arithmetic coding (JBIG). Dictionary techniques - implicit/explicit dictionaries (LZ77, LZ78, LZW). Prediction coding. Lossy compression - distortion criteria. Scalar quantization. Vector quantization. Differential encoding (DPCM, delta modulation, speech coding). Transform coding (DCT, wavelet). Subband coding. Application of data compression techniques.					
4. Teaching methods:					
Lectures, computer practice, consultations. The course material is divided into two parts and is tested in two tests during the duration of the course. In practice classes programs are created that implement compression techniques: general data compression, image compression, audio/speech compression. Successfully completed practice tasks are a prerequisite for taking final examination. The final examination is written. The final grade is based on the number of points on the examination, tests and practice tasks.

Students know the basic standards and technologies requires for designing dedicated computer structures and are able to use VHDL language of multiprocessor computer structures.								
3. Course content/structure:								
Real time design of computer supported systems. Design using VHDL, FPGA, CPLD, PLD based functional units. Design of digital comutator components using programmable logic structures.								
4. Teaching methods:								
Lectures, Tutorials, Computer practice,. Consultations								
During the term students attend lectures and computer practice classes.								
Knowledge evaluation (maximum 100 points)								
Pre-examination obligations			Mandatory	Points	Final exam		Mandatory	Points
Homework			Yes	30.00	Coloquium exam		No	40.00
					Theoretical part of the exam		Yes	30.00
					Practical part of the exam - tasks		Yes	40.00

Table 5.2 Course specification

Course:		Data Warehouse Systems				
Course id:	E2502					
Number of ECTS:	6					
Teacher:	Luković S. Ivan					
Course status:	Elective					
Number of active teaching classes (weekly)						
Lectures:	Practical classes:	Other teaching types:	Study research work:	Other classes:		
3	0	3	0	0		
Precondition courses						
None						
1. Educational goal:						
Advanced students' education in the Data Warehouse (DW) system development and its application in Business Intelligence, i.e. software support of strategic and tactic management in organization systems.						
2. Educational outcomes (acquired knowledge):						
To gain necessary skills and knowledge for the design and implementation of business intelligence and data warehouse systems in industry practice, as well as coupling DW systems with decision support systems.						
3. Course content/structure:						
Characteristics, tasks and application domains of DW systems. Strategic system analysis as a prerequisite for the development of DW and business intelligence systems. Planning the DW system development process. A common methodology of the DW system development. A common DW system architecture. Enterprise DW systems and Data Mart systems. A common structure and the design of database schemas for DW systems. Methods and techniques of the initial load and subsequent refreshing of a DW database. Extraction, transforming and loading data into a DW database – ETL process. Computation of aggregated data in DW databases. Database Management Systems' mechanisms aimed at providing various DW system implementations. Preserving operational performances of DW systems. Decision support systems. OLAP tools and data analyses. Reporting techniques and tools. Data Mining techniques and tools in DW systems.						
4. Teaching methods:						
Teaching is performed through lessons, oral and computer exercises (in the computer classroom), as well as consultations. Through the teaching process, students are constantly motivated to an intensive discussion, problem oriented reasoning, independent study work and active participation in the whole lecturing process. The prerequisite to enter final exam is to complete all the pre-exam assignments by earning at least 30 points.						
Knowledge evaluation (maximum 100 points)						
Pre-examination obligations		Mandatory	Points	Final exam	Mandatory	Points

Table 5.2 Course specification

Course:		Multimedia Systems				
Course id: E2505						
Number of ECTS: 6						
Teachers:		Ivetić V. Dragan, Suvajdžin Rakić B. Zorica, Mihajlović R. Dragan				
Course status:		Elective				
Number of active teaching classes (weekly)						
Lectures:		Practical classes:	Other teaching types:	Study research work:		Other classes:
3		0	3	0		0
Precondition courses None						
1. Educational goal:						
Enabling students to collect, handle, archive, programme, synchronize and present multimedia data flow in the network environment.						
2. Educational outcomes (acquired knowledge):						
Acquired knowledge and skills are used for development/use of software/systems of expressed multimedia.						
3. Course content/structure:						
Multimedia (concepts, characteristics and media data flow). Characteristics of audio/video/image-graphic media (music-MIDI; speech; video-TV and HDTV / 3D). An overview of standards for compression and optical storage (standard algorithms; JPEG2000 and MPEG 1, 2, 4, 7 and 21; CD DA-ROM-WO-RW; DVD; holograph). MM communication systems (timer-user-control space and CSCW; requirements and limitations of the protocol on presentation-application and network-transportation ISO-OSI levels) and videoconference. MM data base (structures and operations). Synchronization of MM data (four-layer reference model and distributed systems). Program abstraction, tools and applications (programme and script languages; authoring systems and MM kiosk).						
4. Teaching methods:						
Lectures, Computer Practice, Consultations. The course is organized in 2 wholes which are checked in the form of 2 tests during the lectures. During Practice, multimedia contents are presented and manipulated on programs (DirectX or OpenGL) or authoring (Flash) levels, creating simple systems for exchange of multimedia contents in real time. The quality of the Practice work is evaluated. Successfully solved exercises are the examination prerequisites. The examination is taken in the written form. Points won at the examination, tests and prerequisites are added to form the final grade.

1. Educational goal:						
Advanced education of students in the field of Database Management Systems (DBMS) applications, and database (DB) administration, with the possibility of their easy involvement in industry projects in the field of database system development.						
2. Educational outcomes (acquired knowledge):						
Acquiring of skills and knowledge necessary for the application of DBMSs in practice and database administration.						
3. Course content/structure:						
Features and tasks of DBMSs. Physical architecture of a DBMS. Memory management in a DBMS. File management in a DBMS. Physical database organization and performance management. Techniques for the usage of views, sequence generators and indexes at the DB server. Advanced SQL capabilities for database updates and queries. Query optimizers. Mechanisms for providing DB security and safety. DB backup, restore and recovery. Implementation of distributed databases. Software tools for database administration.						
4. Teaching methods:						
Teaching is performed through lessons, oral and computer exercises (in the computer classroom), as well as consultations. Precondition courses							None	
1. Educational goal:								
Students gain advanced knowledge in the field of software based business process modeling and the implementation of service oriented software architectures. Adopting knowledge about languages and techniques for business process modeling and process model transformations into specifications of software system architectures.								
2. Educational outcomes (acquired knowledge):								
The acquired knowledge is used in practice, particularly in projects including system specification and development. It is applicable in all problem domains, where it is necessary to create business process models and then use them to specify architectures of complex software systems or optimize the business processes themselves.								
3. Course content/structure:								
A notion, characteristics, and a role of business process in organization systems. Basic motives, origins and principles of business process modeling. Business process and user requirement analysis. Business rules and business rule models. Business process flows and document flows in business processes. Business process engineering and document engineering. Business process modeling languages and techniques. Business process modeling and execution languages BPMN and BPEL. Concepts of Service Oriented Architectures (SOA). SOA languages. Transformations of BPMN specifications to BPEL and service orchestration. Software environments for business process modeling and specification of software architecture SOA aspects. Evaluation of effectiveness and re-engineering of business process models.								
4. Teaching methods:								
Teaching is performed through lessons, oral and computer exercises (in the computer classroom), as well as consultations. Through the teaching process, students are constantly motivated to an intensive discussion, problem oriented reasoning, independent study work and active participation in the whole lecturing process. Table 5.2 Course specification

Course:		Social Networks						
Course id:	E2523							
Number of ECTS:	6							
Teachers:		Gostojić L. Stevan, Nenadić M. Goran						
Course status:		Elective						
Number of active teaching classes (weekly)								
Lectures:		Practical classes:		Other teaching types:		Study research work:	Other classes:	
3		0		3		0	0	
Precondition courses							None	
1. Educational goal:								
Understanding social concepts and technological infrastructure of social networks and social computing; understanding development trends of social computing; acquisition of knowledge and skills needed for development of social networking software; introduction to social network analysis and data mining; acquisition of basic knowledge about ethical and legal aspects of usage and development of social networking software and social network analysis and data mining.								
2. Educational outcomes (acquired knowledge):								
After successfully completing the course student: (1) understands social concepts and technological infrastructure of social networks and social computing, (2) understands development trends of social computing, (3) is qualified to develop social networking software, (4) is qualified in social network analysis and data mining, (5) is aware of ethical and legal aspects of usage and development of social networking software and social network analysis and data mining.								
3. Course content/structure:								
(1) overview of social networks and social computing, (2) Web 2.0, (3) identity management, (4) social network representation and analysis (graph theory and social networks, strong and weak ties, degree centrality, network segmentation, diffusion of information), (5) social computing standards, (6) social network data mining (classification and recommendation systems, sentiment analysis, opinion mining), (7) privacy and risks in social computing and (8) the future of social computing.								
4. Teaching methods:								
Teaching methods include: lectures, computer practice classes and consultations. During the lectures the content of the course is presented using the necessary didactic tools while student active participation is encouraged. The practical aspect of the course is covered at computer practice classes through assignments which students do independently or with the help of teaching assistants. The course lecturer and teaching assistants have consultations with the students. During the consultations the students are given additional explanations of the material covered at the lecture and practice classes.

Precondition courses		None			
1. Educational goal:					
The aims of the course are: provide students with the knowledge of important concepts and techniques of text mining and information extraction; make students capable of applying text mining (and information extraction) methods, tools and techniques.					
2. Educational outcomes (acquired knowledge):					
Students are acquainted with important concepts and techniques of text mining and information extraction and are capable of applying text mining (and information extraction) methods, tools and techniques.					
3. Course content/structure:					
Basic concepts and overview of the field of computational text analysis and information extraction. Pre-processing of the text. Lexical, syntactic and semantic analysis. The use of machine learning methods in the analysis of text: classification and clustering of textual documents. Probabilistic models for information extraction:Maximum Entropy Models,Hidden Markov Models, Conditional Random Fields. Rule-based information extraction. Automatic extraction of terms. Automatic extraction and semantic annotation of named entities in text. Automatic text summarisation. Systems for automatic answering questions. Visualization of text data. Information extraction from business reports. Automatic recognition of emotions and attitudes from text (opinion and sentiment mining). Information extraction in biology and medicine.					
4. Teaching methods:					
Lectures, laboratory exercises, consultations. The exam is oral. Exam score is based on the success of the laboratory exercises and the oral exam.

Precondition courses		None				
1. Educational goal:						
Understanding of concepts and elements of designing and implementation of service oriented architectures in software systems.						
2. Educational outcomes (acquired knowledge):						
Upon successful completion of the course students will be able to design and implement contemporary service oriented architectures for software systems and SOA-specific methodologies, technologies and standards; analyze business organizations and models them as a set of services; orchestrate existing services for the creation of new services and applications.						
3. Course content/structure:						
SOA overview: integration of business processes and SOA; deriving services from the organization's mission; associating SOA design with the project management process. The SOA design process: transition from conceptual to executable services; structuring business requirements in a SOA; adapting services to business organization and needs; design patterns and SOA. Discovery and conceptual service design: defining service domains; atomic service determination; creating composite services; identifying needed resources; old information resources and their integration in SOA. Developing logical services: integration with service users; composition styles; principles of effective design; meeting business needs. Converting design to specification: specifying operations; specifying service contracts; specifying messages. Implementing services: parallel development; adapting the infrastructure for SOA; managing long-running business processes; service development. Managing SOA environment: evaluating SOA - Services Integration Maturity Model; functions and the use of Enterprise Service Bus.						
4. Teaching methods:						
Lectures; Computer practice. Consultations. The examination is oral. The final grade is formed on the bases of success at laboratory practice and oral examination.

3	0	3	0	0	
Precondition courses		None			
1. Educational goal:					
Preparing students, future computer (SW / HW) engineers, for participation in the processes of providing quality IT services to defined business domain.					
2. Educational outcomes (acquired knowledge):					
After successfully completing the course the student is able to: 1. Understand the modes of organization of the company. Is able to handle the basic (core) processes of the company to support this process. Understands the basics of IT function. 2. Understand the classification of IT resources, the planning capacity of IT resources and budgets for IT resources. 3. Understand the basics of operational risk management including IT risks. 4. Understand the need for harmonization with the regulations depending on the business domain. 5. Understand the basics of information security management. 6. Understands the basics of IT control and audit. 7. Understand the difference between project management and service management. 8. Understand the concept of using best practices in the management of IT resources. 9. Understand the life cycle of IT services (service strategy, service design, service transition, service operation, and service retirement), and how to model IT service, etc.					
3. Course content/structure:					
1. Management of IT resources. Definition (of interest) of IT resources: Methods and systems for managing IT resources provided to satisfy the required functionality, quality, safety, and performance of IT solutions at minimal cost. 2. Planning and control of IT resources. Categorization of IT resources (HW, SW, HR), IT Resource Capacity Planning: IT planning, project planning and service IT resource planning and IT budget (CAPEX, OPEX, depreciation, etc..). Capacity control and exercise plans: methods and tools to control the capacity (bandwidth network, server performance, storage space systems, computer users (non) utilization SW licenses, the man spent days * developers, and others..). 3. IT risk management, IT security and compliance with regulatory requirements. The definition of risk, IT risk categorization, measurement of risk: qualitative and quantitative methods for risk management, IT risk association with operational risk management, information security basics: logical and physical security, procedures, policies and tools to ensure information security, regulatory requirements: SOX , examples of regulatory requirements finiansijskoj industry, IT controls and audit: IT control objectives and audits, COBIT, CMMI, process control and execution of IT audits, internal and external audit. 4. Project management vs. services management. A review of project management: definition, objectives, processes for the project, project resources. The relationship between IT projects and IT service operations: defining dependencies, IT resource planning complex (multi project and multi-service), etc..					
4. Teaching methods:					
Multimedijalna predavanja i vezbe na prakticnim primerima uz koriscenje odgovarajucih SW alata.

1. Educational goal:						
Students learn about systems of automatic control based on computer intelligence methods.						
2. Educational outcomes (acquired knowledge):						
The acquired knowledge can be used in solving concrete engineering problems.						
3. Course content/structure:						
Application of artificial neural networks in the identification, diagnosis, prediction and control. Fuzzy systems in systems engineering. Neuro fuzzy systems: combining fuzzy logic and neural networks in control. Genetic algorithms in systems engineering. Design of classic and neuro fuzzy regulators using genetic algorithms. Support vector machines and their application in identification and control of systems.						
4. Teaching methods:						
Lectures. Computational and computer practice. Consultations. The exam is written and oral. Passing the written part is the prerequisite for the oral part. The final grade is formed on the bases of achievements at the colloquium, homework assignments and the quality of the written and oral part of the exam.						
Knowledge evaluation (maximum 100 points)

Course:		Integration of Distributed Control Systems				
Course id: SEAM06						
Number of ECTS: 6						
Teachers:		Čapko Lj. Darko, Erdeljan M. Aleksandar				
Course status:		Elective				
Number of active teaching classes (weekly)						
Lectures:		Practical classes:	Other teaching types:		Study research work:	Other classes:
3		0	3		0	0
Precondition courses None						
1. Educational goal:						
The goal of this course is to acquire the necessary knowledge about the concepts and integration of distributed systems and their implementations.						
2. Educational outcomes (acquired knowledge):						
Outcomes are the knowledge, skills and abilities necessary for understanding the complexity of integration in distributed and SCADA systems and solve practical engineering problems in power systems.						
3. Course content/structure:						
Software architecture overview. Architectural styles: layered architectures, object-oriented architectures, data-centered architectures, event-based architectures. Service-oriented architecture (SOA) fundamentals: definition, requirements, design principles, interfaces, protocols, functionality, elements of SOA; service types and layers. SCADA services and description of services. SOA types in SCADA systems: fundamental, service composition architecture, service inventory architecture, service-oriented enterprise architecture; Technologies for SOA implementation; Web services and protocols. Enterprise service-bus (ESB); ESB infrastructure, enterprise application integration via services; examples of ESB based application integration in SCADA systems. XML based technologies used for interfacing with SOA services.						
4. Teaching methods:						
Teaching is conducted through lectures and computer exercises. During the exercises the student is required to apply their knowledge in practice.

Table 5.2 Course specification

Course:		Computer game development				
Course id:	E2528					
Number of ECTS:	6					
Teachers:		Ivetić V. Dragan, Obradović M. Ratko				
Course status:		Elective				
Number of active teaching classes (weekly)						
Lectures:		Practical classes:	Other teaching types:	Study research work:		Other classes:
3		0	3	0		0
Precondition courses		None				
1. Educational goal:						
Enabling the student to understand the developmental process for modern computer games and enabling him or her to apply their knowledge in the are of highly interactive computer games.						
2. Educational outcomes (acquired knowledge):						
Acquired skills and competencies are used for the development of computer games, including both those intended for serious use and those intended for entertainment, and simulations.						
3. Course content/structure:						
The concept of a video game. The technology and the process of computer game development. Interaction and computer games(development in the instances of player versus the computer and in the instances of multiplayer gameplay). Simulation in computer games. The psychological aspects of computer game development (the concept of gameplay and user satisfaction metrics). The concept of storytelling and aesthetics in computer games. The applicability of computer games (the entertainment game market, serious games and games and education).						
4. Teaching methods:						
Lectures, computer laboratory exercises, consultations. The contents of the course are divided into two parts, the comprehension of each of which is tested using two tests conducted during lecture time. The exercises are conducted using the XNA library and authoring tool in order to study different aspects of computer game development. Knowledge thus acquired is tested using an independent project which includes the design and implementation of a simple but complete computer game. The work on this project is done in teams. The successful completion of the laboratory exercises is a precondition of the final exam. The final exam consists of a written examination. The final grade is obtained by adding up the results from the exam, the tests and the exercises.

Table 5.2 Course specification

Course:		Domain Specific Modeling and Languages				
Course id:	E2530					
Number of ECTS:	6					
Teacher:	Luković S. Ivan					
Course status:	Elective					
Number of active teaching classes (weekly)						
Lectures:	Practical classes:	Other teaching types:	Study research work:	Other classes:		
3	0	3	0	0		
Precondition courses						
None						
1. Educational goal:						
Getting knowledge about advanced techniques and methods of domain specific modeling and the development of domain specific languages.						
2. Educational outcomes (acquired knowledge):						
The acquired knowledge is used in practice, particularly in projects including system specification and development. It is applicable in all problem domains, where meta-meta models are to be used and specific meta-models are to be developed together with domain specific languages so as to solve practical problems.						
3. Course content/structure:						
Domain specific modeling methods and techniques. A notion and role of a meta-meta model. MOF 2.0 and the equivalent meta-meta models. Software tools for domain specific modeling. A notion, role, taxonomy and evolution of domain specific languages. Domain specific language development methods. Software tools for domain specific language development. Domain specific language implementation techniques. Methods and techniques of the problem domain analysis. Applications of domain specific languages in the domain specific modeling. Model transformations. Program code generators. Applications of domain specific modeling and languages in various problem domains.						
4. Teaching methods:						
Teaching is performed through lessons, oral and computer exercises (in the computer classroom), as well as consultations. Through the teaching process, students are constantly motivated to an intensive discussion, problem oriented reasoning, independent study work and active participation in the whole lecturing process. The prerequisite to enter final exam is to complete all the pre-exam assignments by earning at least 30 points.						
Knowledge evaluation (maximum 100 points)

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Software Engineering and Information Technologies

Standard 06. Programme Quality, Contemporaneity and International Compliance

The study programme Software Engineering and Information Technologies is in accordance with contemporary international scientific trends and state of the professional field and is comparable with similar programmes at higher education institutions abroad.

Software Engineering and Information Technologies study programme is formed in such a way to be complete and comprehensive and provide students with the latest scientific and professional knowledge in this field.

Software Engineering and Information Technologies study programme is comparable and coordinated with:

1. Software Engineering study programme implemented at Rochester Institute of Technology (<http://www.se.rit.edu/graduate-study>)

2. Software Engineering study programme implemented at Drexel University (<http://www.ece.drexel.edu/MSSE.html>)

3. Software Engineering study programme implemented at Florida Institute of Technology (http://www.fit.edu/programs/grad/ms_software_engineering)

4. Software Engineering study programme implemented at University of Glasgow (<http://www.gla.ac.uk/postgraduate/taught/softwareengineeringmsc/>)

5. Software Engineering study programme implemented at City University – London (<http://www.city.ac.uk/courses/postgraduate/software-engineering>)

6. Software Engineering and Management study programme implemented at University of Goeteborg (<http://www.itufak.gu.se/english/education/programmes/se120hec/>)

Faculty members, assistants and students have, for the last few years, been actively involved in the Campus Europea students exchange project. Large number of these students are studying some aspects of software engineering.

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Software Engineering and Information Technologies

Standard 07. Student Enrollment

Although there is a high demand in job market for professionals in the area of software engineering, the Faculty of Technical Sciences, in accordance with social demands and its resources and approved number of students in the accreditation process, enrolls to graduate academic studies-Master of Software Engineering and Control Engineering on budget funded and self funded studies a certain number of students defined each year by the special decision of the Educational and Scientific Council of the Faculty of Technical Sciences.

The selection and enrolment of the applied candidates is based on their success during the previous education, and entrance examination as defined by the Regulations on Enrolment of Students to Study Programmes.

Students from other study programmes and persons who have completed studies which are worth at least 240 ETCS can enroll into this study programme, as defined by the Regulations on Enrolment of Students to Study Programmes. The committee for evaluation (formed by all department heads participating in the realization of the study programme) evaluate all the passed examinations of the candidates and based on the accepted number of points determine the year of studies the candidate can enroll to.

Candidates who have completed appropriate study programme gain right for enrollment at Master academic studies. Committee for quality control decides whether the candidates who gained right for enrollment are obligated to take entering exam. If Committee for quality control decides that examination has to be taken, candidates take the entering exam: tests in the field of study programme.

Committee, in accordance with the Regulations on Enrolment of Students to Study Programmes, has the right to approve enrollment of candidates who have not completed appropriate academic studies which are worth minimum 240 ETCS, if vacancies remain after enrollment of all candidates who meet the requirements. Candidates who have not completed appropriate undergraduate study programme can be approved to enroll if they successfully pass entering examination. Committee, in that case, determines courses from the undergraduate studies that student must additionally take and successfully pass. Total number of ETCS credits of those additional courses determined by Committee can not exceed 30 (thirty). Committee for quality control members are Head of the study programme and Heads of all departments to which the courses from the study programme belong, or teachers who Heads of those departments determine, in accordance with the Regulations on Enrolment of Students to Study Programmes.

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Software Engineering and Information Technologies

Standard 08. Student Evaluation and Progress

The final grade in each course included in this programme is formed by continual monitoring of students' accomplishments throughout the academic year and by passing the final examination. Students master the study programme by taking examinations and thus obtaining a certain number of ECTS credits, in accordance with the study programme. Each course within the programme is worth a certain number of ECTS credits which students obtain by successfully passing the course examination.

The number of ECTS credits is based on the quantity and quality of work students are required to submit during a certain course and on the Faculty of Technical Sciences' unique methodology for all study programmes. Students' success in mastering a certain course is constantly monitored during classes and is expressed in points. The maximum number of points obtained in a course is 100.

Students obtain points from a course through their work during classes, completion of the pre exam duties and taking the examination. The minimal number of points a student can obtain by fulfilling the course prerequisites during classes is 30, the maximum 70.

Each course at the study programme has a clear and transparent mode of obtaining points. The ways of obtaining points during the classes includes the number of points obtained on the basis of each individual activity during the classes or completing pre exam duties and by passing the course examination.

The final success of students at a course is presented with a grade from 5 (fail) to 10 (excellent). The student's grade is based on the overall number of points obtained by fulfilling pre exam duties and taking the examination, and in accordance with the quality of acquired knowledge and skills.

For students to be able to take a course examination, they have to obtain at least 55% of the overall number of points through pre exam duties during the semester. Additional requirements for taking the examination are defined separately for every course.

Student advancement during the studies is defined by the Regulations on studying on master academic studies.

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Software Engineering and Information Technologies

Standard 09. Teaching Staff

For the realization of the Software Engineering and Information Technology study programme, there is the faculty staff with necessary scientific, artistic and professional qualifications.

The number of teachers is adequate to the needs of the study programme and depends on the number of subjects and the number of classes for those subjects. The total number of staff members is adequate for the total number of classes at the study programme, so that a teacher has an average of 180 classes of active classes (lectures, consultations, tutorials, practice classes, etc.) a year, i.e. 6 classes a week. Of the total number of teachers all 100% are employed full time.

The number of assistants is adequate for the needs of the study programme. The total number of assistants at the study programme is adequate to cover total number of classes so that the assistants have an average of 300 hours of active classes a year, i.e. 10 classes a week. The scientific and professional qualifications of the teaching staff are adequate for the educational and scientific field and the level of their duties. Each teacher has at least five references in the scientific or professional field taught at the study programme.

The size of the group for lecture classes is up to 32 students, for practice classes up to 16 students and for laboratory practice up to 8 students.

None of the teachers has more than 12 hours of classes a week. All information regarding the teaching staff and assistants (CV, appointments, references) are available to public.

Summary data for teacher's scientific or art and professional activity:					
Quotation total :			119		
Total of SCI(SSCI) list papers :			7		
Current projects :			Domestic :	1	International : 0

	UNIVERSITY OF NOVI SAD FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6 Study Programme Accreditation MASTER ACADEMIC STUDIES Software Engineering and Information Technologies	
--	---	--

Science, arts and professional qualifications

Name and last name:		Živanov S. Žarko	
Academic title:		Assistant Professor	
Name of the institution where the teacher works full time and starting date:		Faculty of Technical Sciences - Novi Sad 01.01.2001	
Scientific or art field:		Applied Computer Science and Informatics	
Academic career	Year	Institution	Field
Academic title election:	2012		Applied Computer Science and Informatics
PhD thesis	2012	Faculty of Technical Sciences - Novi Sad	Applied Computer Science and Informatics
Magister thesis	2007	Faculty of Technical Sciences - Novi Sad	Applied Computer Science and Informatics
Bachelor's thesis	2000	Faculty of Technical Sciences - Novi Sad	Applied Computer Science and Informatics
List of courses being held by the teacher in the accredited study programmes			
	ID	Course name	Study programme name, study type
1.	E217	Computer Architecture	(E20) Computing and Control Engineering, Undergraduate Academic Studies (ES0) Power Software Engineering, Undergraduate Academic Studies
2.	E223A	Object Programming	(E20) Computing and Control Engineering, Undergraduate Academic Studies (ES0) Power Software Engineering, Undergraduate Academic Studies
3.	E225	Operating Systems	(E20) Computing and Control Engineering, Undergraduate Academic Studies (ES0) Power Software Engineering, Undergraduate Academic Studies
4.	E234	Compilers	(E20) Computing and Control Engineering, Undergraduate Academic Studies (ES0) Power Software Engineering, Undergraduate Academic Studies (MR0) Measurement and Control Engineering, Undergraduate Academic Studies
5.	SZP01	Selected topics in Information technologies	(E00) Power, Electronic and Telecommunication Engineering, Specialised Professional Studies
6.	E2529	Parallel and distributed architectures	(E20) Computing and Control Engineering, Master Academic Studies (ES0) Power Software Engineering, Master Academic Studies (MR0) Measurement and Control Engineering, Master Academic Studies (E10) Power, Electronic and Telecommunication Engineering, Master Academic Studies
7.	E2534	Data Compression	(E20) Computing and Control Engineering, Master Academic Studies (SE0) Software Engineering and Information Technologies, Master Academic Studies
