Study Programme Accreditation

MASTER ACADEMIC STUDIES

Architecture

Standard 00. Introduction

The study programme of the graduate academic studies in Architecture presents the continuation of the undergraduate academic studies of Architecture at the Faculty of Technical Sciences, University of Novi Sad

The idea about education of architects in the Autonomous Province of Vojvodina, as a region with many specificities, has been present at the Faculty of Technical Sciences for decades. This idea was finally realized in 1996. when the Department for Architecture (today Department for Architecture and Urban Planning) was established and which is still intensively and continuously developing.

Department for Architecture and Urban Planning has modern and open teaching syllabus and the programme, in the unity of theory and practice, local influences and world trends, based on the combination of architecture as an art and as a built environment of great social, economic, technical, cultural and developing significance.

Department for Architecture and Urban Planning insists on the multidisciplinary approach, which is the main approach in studying architecture. Therefore, the curriculum comprises of different courses – from fundamental disciplines, through architectural and urban design, landscape architecture, interior architecture and design, protection of architectural heritage, all the way to the courses dealing with specific topics. Department for Architecture and Urban Planning cooperates with all other departments at the Faculty of Technical Sciences. Therefore, a number of lecturers and associates from the entire Faculty (especially the Department for Civil Engineering) are engaged in a number of courses. An important part of the development strategy of the Department for Architecture and Urban Planning is the possibility of development and exchange of knowledge through intensive cooperation with Architecture faculties and Departments from the region, especially from Europe, which resulted in the engagement of the visiting professors from relevant Universities, thus contributing to the quality of lectures and student education. Greater mobility of students and teaching staff and greater number of international research projects is seen as a chance for creation of the unique and recognizable position of the Department in the international circles.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Architecture

Standard 01. Programme Structure

The study programme Architecture is dealing with the issues of the built environment through an integral approach, enabling students to work in different spheres of the profession. The academic title obtained is Master in Architecture. The final outcome of the educational process is to enable students to work professionally, to apply acquired knowledge, and to create a solid base for further education, if they decide so, in the form of doctoral or specialist studies.

In order to be enrolled to the study programme, students need to have graduated from the undergraduate academic studies in the appropriate field with at least 240 ECTS credits. Application procedures, grading and registration of candidates, is defined in the Regulations of enrollment in approved study programs at the faculty level.

There are three study groups at the graduate academic studies in Architecture, which last one year (60 ECTS): Design in architecture and urban planning, Contemporary theories and technologies applied to architecture and urban planning and Interior design. Students choose one of three study groups in accordance with their previous education and personal and professional inclinations. Lectures for the study group is organized if there is sufficient number of students enrolled. If there are not enough candidates, lectures are cancelled and the management of the Faculty makes the special decision about the way of organizing lectures for that specific study group (mentoring work with the students).

The study group Design in architecture and urban planning lasts two semesters and is intensively dealing with the issues of architectural and urban design. Within the course Architectural design of complex programmes and Urban design of complex programmes, and other courses that follow them, students are introduced to the complex programmes and issues of their design, development, elaboration and realization through an intensive work on their own projects. Thus, students are ready for all aspects of future work in the practice, additionally researching their own designing potential. Elective courses are elected from the group of suggested courses, but students have the possibility to choose a certain number of courses from the list of all courses at the Faculty of Technical Sciences, University of Novi Sad or some other university in the country or abroad, according to their personal inclinations and desires and with the consent of the Head of the study programme. Thereby the preconditions for the attendance of the elected course have to be met.

The study group Contemporary theories and technologies applied to architecture and urban planning upgrade students theoretical background in architecture and urban planning, and introduces them to a researchwork which may be encountered in further studies. Students are upgrading the knowledge in the field of modern technologies in this field, which are necessary for the students in contemporary architectural practice. Through numerous obligatory and elective courses offered by the programme, students are introduced to the research methodology, theory and criticism in architecture and urban planning, as well as modern technology and they further profile their personal inclinations. By getting introduced to the research work and all its domains, students deepen their own theoretical-methodological knowledge, thus building the basis for the personal research work, if they choose it.

The study group Interior Design through two semesters upgrade students the knowledge in the field of interior design. As part of the required and elective courses, students through intensive work on their own projects, learn about the complex issues of designing the interior spaces. In this way, they prepare in all aspects for future work in practice in the field of interior design.

The course consists of lectures and practice. During the teaching process, students are referred to the independent research and the emphasis is placed on his personal involvement in the teaching process. During the lectures theory is presented using the adequate didactic tools, but students are also presented with the research trends in the specific field. During practice, which accompanies lectures, students work on the specific designing problems or research topics dealing with the field of study, thus coming to direct contact with the matter being taught. Most practice is auditory and consultative. For some courses they are computer practice and are based on the personal contact between the lecturer and the student, thus establishing dynamic and creative environment through which projects are being realized.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES Architecture

Standard 02. Programme Objectives

The purpose of the Study Programme is the education of students for the profession of Master in Architecture in accordance with the needs of society.

The Study Programme Architecture is designed to provide the acquisition of skills that are socially justified and useful. Faculty of Technical Sciences defined tasks and goals for educating highly competent personnel in the field of technology. The purpose of the Study Programme of Architecture is completely in accordance with the graduate objectives and goals of the Faculty of Technical Sciences.

Graduated engineers of Architecture – Masters are educated by realization of the study programme designed in this way and possess competences in the European and worldwide circles.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

Standard 03. Programme Goals

The objective of the study programme is to achieve student's scientific competencies and academic skills in the field of Architecture. This also includes the development of creative abilities in considering problems and the ability of critical thinking, the development of teamwork skills and the mastering of specific practical skills necessary in the profession.

The objective of the study programme is to educate an expert who possesses sufficiently consistent and useful knowledge in the field of architecture and urban planning which can be applied in the practice and is constantly upgraded with practical experience.

One of the specific objectives which is in accordance with educational objectives of experts at the Faculty of Technical Sciences is to develop students` awareness of the need for permanent education, the development of a society in general and the environmental protection. The objective of the study programme is also to introduce students to the challenges and advantages of the team work, which is of great importance for the field of architecture and urban planning, since the professional work is designed as team and multidisciplinary. Besides, through the teaching process students develop the ability of reporting and coherently presenting their ideas, design concepts, research results, thus gaining the capacity for communication with professional and wider public.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Architecture

Standard 04. Graduates` Competencies

Graduate students of the graduate academic studies in Architecture are competent to solve real problems in the practice, as well as to continue education if the decide so. Also, the master graduates are qualified to acquire the title of the chief designer in the field of Architecture, after they complete the requirements prescribed by the Chamber of Engineers.

The competences include, above all, the development of the ability for critical thinking, ability of problem analysis, solution synthesis, behaviour prediction of the chosen solution with the clear idea of good and bad sides of the chosen solution.

Qualifications that indicate the end of the graduate academic studies acquire students:

- •who have demonstrated systematic knowledge and understanding in the field of architecture and urban planning that complements the knowledge gained at the undergraduate academic studies, being the basis for developing critical thinking and application of knowledge;
- •who are able to apply knowledge in solving problems in the new or unknown environment in wider or multidisciplinary fields within the educational-scientific field of the study;
- •who have the ability to integrate knowledge, solve complex problems and make decisions based on the available information taking into consideration social and ethical responsibilities related to the application of their knowledge and judgements;
- •who are able to clearly and unambiguously transfer knowledge and the way of making conclusions to the professional and wider public;
- •who possess the ability to continue the studies in the way they independently choose.

When it comes to the specific capabilities of students, mastering the study programme of the graduate studies, the students acquires detailed knowledge and understanding of all disciplines of the chosen study group, as well as the ability for solving specific problems using the scientific methods and procedures. Graduated students of Architecture are able to adequately write and present results of their research, that is, to concretize and present their project work. During the studies it is insisted on the intensive use of information-communication technologies as well as on enabling students to use latest software for the purposes of design and graphic presentation.

Graduated students from this level of study possess competences for anticipating and application of innovation in the profession, as well as for cooperation with social and international environment.

Students will be enabled to design projects based on the given programme, to work on their elaboration, coordinate the work of others involved in the process, and to organize team work and to prepare the building documentation, monitor and manage the building process. During their education, students acquire knowledge to independently solve the set problems, work on possible solutions and responsibly make adequate conclusions and decisions, clearly judging all their qualities.

Students who obtain their Master degree in Architecture acquire knowledge on how to economically utilize natural resources of the Republic of Serbia and they are completely aware of the position and responsibility of future engineers in promoting and applying the principles of sustainable development in architecture and urban planning.

Special attention is paid to the development of skills in team work and development of professional ethics.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Architecture

Standard 05. Curriculum

The curriculum of the Graduate Academic Study Programme in Architecture is made to meet the set goals. During the course of the graduate academic studies students define problems in the field of architecture and urban planning by dealing with specific issues in the field covered by the study group. Through elective courses students are able to satisfy their own research and design aspirations and to continue to further develop their professional profile.

All courses last one semester and are worth a certain number of ECTS credits, one credit comprising approximately 30 hours of a student's activity.

The curriculum defines every course of the study programme which states the following: the course name, type, the year and semester when the course is lectured, the number of ECTS credits, the name of the lecturer, the course objective with the expected outcome, the knowledge and competences the student will acquire, the prerequisites for taking the course, the course content, the recommended literature, the methods of lecturing, the knowledge tests and evaluation, and other data.

The study programme is created in accordance with the European standards concerning the enrolment requirements, the duration of studies, the terms of enrolling into the next year of studies, the acquisition of a diploma and the mode of study.

Professional practice-practical work is the integral part of the curriculum of the study programme Architecture and it lasts 45 hours and is realized in the adequate scientific-research institutions, in relevant institutions dealing with planning, design and building, as well as in private and public enterprises dealing with activities relevant for the acquisition of practical experience in the field of architecture.

The student completes the studies by writing the Master Thesis which consists of two inseparable parts. The firs part consists of the study research work – master, as a preparation of the research necessary for deeper understanding of the master thesis problem, as well as defining the programme project being done. The second part is writing and defense of the Master Thesis, as continuation of the first phase of research, which is the architectural and/or urban solution of the problem. Thus, the Master Thesis is presented in the printed form which combines conclusions for the research phase and graphic appendix which represents the architectural and/or urban solution.

Before the defense of the Master Thesis, the quality of the thesis and its compliance with the established quality system of the master thesis is assessed by the five member committee, consisting of professors and associates from the department. The committee evaluates thesis of all candidates who turned in the thesis in the same graduate period. If the thesis gets positive grade of the committee, the candidate has the right to present and defend the Master Thesis. The Master Thesis is presented and defended in front of the committee consisting of at least three professors, where at least one of them has to be from the different department or faculty. Final grade of Master Thesis is derived from the grade in theoretical-methodological work and the grade in the project part of the thesis, as well as from the presentation and defense of the thesis.

1. Educational goal:

Introduction to the basic theories and conceptual frameworks that define the emergence of architectural works. Reviewing the relationship of architecture and the wider social and cultural context. Development of synthesis opinions about architecture. The establishment and development of critical observation, study, analysis and evaluation of architectural structures. Establishing a capability of applying synthesis on architecture.

2. Educational outcomes (acquired knowledge):

Ability to act individually or in a team in the field of architecture theory and criticism.

3. Course content/structure:

Theories and conceptual frameworks in architecture. The problem of the role, position, identity and potential of architectural structures. Types and forms of architectural structures (the structures, projects and studies, competition projects, ephemeral and spatial structure, texts and publications ...). Forms of action in architecture (design and construction, history, theory and criticism, education, communication in architecture ...). The program in architecture as well as theoretical and phenomenological question. Architectural form content, function and meaning. Architectural language - reading and writing. The concept and theory of criticism. Types of critical texts. Analytical theoretical frameworks. Ways of writing critical text.

4. Teaching methods:

Lectures; Practice; Workshops. Term paper and oral examination.

1. Educational goal:

The goal is to introduce students with basic principles of optimization and optimal design. In particular, the students are introduced to classical and modern optimization techniques, as well with possible applications in modern architectural and urban design. In addition, the students are familiarized with basic principles of analysis and design of adaptive, optimizing, self-tuning and evolutionary structures and systems.

2. Educational outcomes (acquired knowledge):

The students are familiarized with recognizing, properly formulating and efficiently solving optimization and control problems. The students are familiarized with basic principles of optimal design, as well with available algorithms and software solutions. The students are also introduced with properties of modern optimal and evolutionary dynamical systems, and possibilities of utilization of these systems in solving a variety of practical problems.

3. Course content/structure:

1. Basic principles of optimization. Formal statement of optimization problem. Classification of optimization problems and algorithms. 2. Classical optimization techniques. 2.1. Unconstrained optimization. Optimization in one and many dimensions, analytic and numeric approach, search methods 2.2. Linear programming 2.3 Basic principles of non-linear programming. Classic numerical methods of nonconvex optimization. 3. Modern global optimization techniques 3.1. Evolutionary and genetic algorithms 3.2 Particle swarm optimization 3.3 Ant colony optimization

1. Educational goal:

Acquiring knowledge about the building process of constructions and the ways of organizing work in the process of building constructions.

2. Educational outcomes (acquired knowledge):

Ability to make organization and construction site study, to make the dynamic construction schedule, as well as the participation in construction site organization and management. Acquired knowledge is directly applied in the engineering practice.

3. Course content/structure:

Project and building management. Building technology and organization project. Construction site conditions. Relationship between building technology and construction site organization. Construction site organization scheme (contemporary object, application of mechanization). Construction organization. Construction organization and adopted technology. Planning methods (CPM, PERT, Gantt diagram, cycle diagram). Computer aided plan processing. Fundamental documentation in construction.

4. Teaching methods:

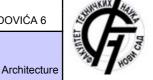

The course is held through lectures in the form of presentation of certain method units and graphic exercises done independently by the students during class with consultations with the teacher assistant. During Practice, students solve given problems (graphic practice) based on the given information (lectures, literature, consultations and general instruction at the beginning of the practice). Examination prerequisites are positively graded works. Part of the practice is done in the computer centre and completed computer practice is a prerequisite for the examination. The examination includes all knowledge presented during the semester and is taken in the written and oral form. Written part of the examination could be taken through 2 modules during the teaching process. Course grade is formed based on the lecture and practice attendance, graphic work grade, computer practice, written and oral part of the examination.

1. Educational goal:

Mastering of the furniture design basics, learning the manufacturing processes and technologies, as well as gaining knowledge about the relevant formal, technological, constructive and ergonomic parameters for the process of designing the furniture.

2. Educational outcomes (acquired knowledge):

Introduction to contemporary design, production and technological processes of making the furniture. Students gain necessary knowledge for designing mobile elements of the interior.

3. Course content/structure:

The history of furniture design; furniture design and contemporary culture; contemporary production; the furniture and the market; anthropological measures; ergonomy and furniture design; technology, processes and the furniture design; artistic and stylistic issues.

4. Teaching methods:

Lectures; Practice; Project design; Final exam.

Precondition courses

1. Educational goal:

The goal of this course is to introduce students to the theoretical principles of modern methodologies in architectural design. Students will learn about the philosophical directions of the end of the 20th century and the way they influenced the creation of the evolutional dynamic systems, morphogenetic principles of the creation of form and the application of these principles in the field of contemporary architectural and urban design

2. Educational outcomes (acquired knowledge):

In this course, students are trained to solve complex, functional and formal problems in the field of architecture and urbanism. Students will be using modern methodologies in the design process to develop analytical thinking and the ability to expand knowledge in solving the complex problems of the built environment. Also students will be familiar with the optimization process and evolutionary systems and potential applications in the design process.

3. Course content/structure:

The basic principles of modern methodologies in the design process-philosophical ideas; Algorithm / chart as a starting point; Using of contemporary methodologies in architectural and urban design; Application of modern techniques and technologies to architectural and urban design; Application of adaptable systems to the problems in the field of architecture, urbanism and urban planning-programming, functional, structural aspects. Top down / bottom up process, Finding Form / form making, Emergence. Complex adaptable systems without central coordination. Evolutionary Systems / morphogenesis. Biomimicry. Digital morphogenesis

Knowledge evaluation (maximum 100 points)

4. Teaching methods:

Lectures, exercises, consultations, and oral exam.

1. Educational goal:

Within the course students will be presented with the theoretical and methodological assumptions of contemporary urban studies aimed at considering the complex processes of urban areas within the overall spatial and social context. Dominant issues of the development of the contemporary cities will be treated with a critical approach, analysis of relevant theories, as well as by analyzing urban spaces in which a variety of influential forces are materialized.

2. Educational outcomes (acquired knowledge):

Students will be trained to develop proper analytical and critical apparatus that will be able to adapt to the specifics of their own scientific research and practical work. Students will be directed towards the understanding of urban transformations as the results of the process that cause them.

3. Course content/structure:

Transformation processes of contemporary cities - the wider context; Modern concept of urban, Contemporary theories of urban growth and development; Specific themes and processes in the development of cities - critical analysis, spatial parameters as key factors of urban transformation - theoretical and practical considerations, the concept of vertical urbanism in theory and practice; Cities of the future; Modern technology as the tool of urban design and city development.

4. Teaching methods:

Lectures, Practice in Design, Consultations

Course grade is formed based on the lecture and practice attendance, success at colloquiums, written and oral examination.

1. Educational goal:

Mastering the basics of the English language: pronunciation of English sounds, acquisition of vocabulary related to everyday situations, mastering the basics of English morphology and syntax.

2. Educational outcomes (acquired knowledge):

Students are able to use spoken and written English in simple, everyday situations.

3. Course content/structure:

The use of articles, nouns (nouns in Plural), adjectives (types of adjectives, possessive adjectives, comparison of adjectives), pronouns (personal and possessive pronouns), auxiliary verbs (be, do, have), modal verbs. The use and construction of tenses (Present Simple, Present Continuous, Present Perfect, Past Simple, future forms). Question and negative form of the sentence. Vocabulary related to everyday topics: introduction, family, free time, work, food and beverages, naming and description of everyday objects, description of people and places etc.

4. Teaching methods:

Communicative method is used, since the objectives and contents of the course are aimed at communication which is very complex. The emphasis is placed on communication between students and teachers and students among themselves, as well as balanced development of all language skills.

develo	evelopment of all language skills.

1. Educational goal:

Acquiring skills for in-depth and comprehensive understanding of the development and changes of various architectural programs during transition in Serbia, the region and the world. Developing capabilities for synthesis opinions about architecture through understanding of historical, artistic, cultural, political and sociological development and their transposition into modern society.

2. Educational outcomes (acquired knowledge):

The outcome of this course is to introduce students to the transformation processes of different architectural programs in the period of the transition. Students will have the opportunity to research a wide range of phenomena in transitional societies studied through architectural changes and development of programs.

3. Course content/structure:

Transitology and modernization in architecture through social sciences. Globalization or transition of architectural programs. Criticism in transition architecture. Architectural transformation and adjustment to the transition. Continuity and changes of architecture in transition. The recent phenomenon of architecture and their manifestation in transition. Transition as an incentive for the creation of original ideas and progress in architecture.

1. Educational goal:

Knowledge about the basics of English for Specific Purposes related to students' future profession. Students read a selection of engineering and scientific texts covering different areas of computing and control engineering in order to learn professional terms in accordance with definitions, classifications, terms and notions adopted by contemporary European and international standards. The knowledge of the English language is expanded by including new vocabulary, compounds, use of prefixes and suffixes, grammatical and syntax structures characteristic of English for specific purposes in this area.

2. Educational outcomes (acquired knowledge):

Students acquire enough knowledge and skills to use professional English in simple communication with clients, colleagues and employers.

3. Course content/structure:

A selection of texts from professional engineering areas. Systematization of verb tenses, conditional sentences, direct and indirect speech, passive.

4. Teaching methods:

Teaching is done using communicative method of language learning. After a short introduction about a topic, the students read the text and find new words in a dictionary. This is followed by a discussion about the topics mentioned in the text and the conclusions offered there. A part of the class is devoted to learning and practicing new vocabulary through oral and written exercises as well as to revision and expansion of knowledge related to certain grammar structures. Students are encouraged to communicate in English through group discussions and pair work.

1. Educational goal:

Acquiring the necessary theoretical basis for understanding the role and importance of design and interiors in the contemporary society. Understanding design and interior design as a specific form of communication. The study of relationships between the interior design and the external phenomena such as economic, social and cultural context, art and science.

2. Educational outcomes (acquired knowledge):

After the course, students gain a theoretical basis for understanding the language of modern design and interiors, as well as their role in contemporary culture. It is expected to establish an analytical relationship to the objects of design and to observe and analyze design beyond its visual appereance.

3. Course content/structure:

Interior Design - Definition, Scope and Boundaries; Interior/ Exterior Relations; Reception and Perception of the Interior Space; Typology of Interior; The Culture of Design; Interior Design as a Form of Communication; Design, Interior Design and Consumer Society; Iconic Design; Design, Interior Design and Contemporary Technologies; Design, Interior Design and Contemporary Art; Design and Sustainability.

1. Educational goal:

Introduction to the language, phrases and forms which need to be satisfied during writing the scientific forms and papers. Extending the professional vocabulary with an emphasis on words useful and striking for writing scientific papers, biographies and other forms. Introduction to the language not related to gander. Enabling students to write clear, concise and grammatically correct thesis and main sentences. Introduction to the definition writing techniques and scientific paper form.

2. Educational outcomes (acquired knowledge):

Enabling students to write scientific texts of a specific scientific form in English in a correct, precise and understandable way.

3. Course content/structure:

Writing biographies, cover letters, abstracts, reports. The knowledge of the scientific article form and technical documentation. Punctuation of the scientific text and title.

4. Teaching methods:

Lectures begin with a short theoretical background related to the written form being studied. This is followed by good and bad examples in the practice and discussion about their characteristics. After that, students independently write about given topic and practice the use of certain vocabulary, structure and form.

1. Educational goal:

Mastering professional vocabulary related to architecture and civil engineering, extending language competences related to professional topics, mastering complex language structures.

2. Educational outcomes (acquired knowledge):

Students mastered professional vocabulary, and are able to understand texts related to profession as well as to have conversations about topics about their future profession.

3. Course content/structure:

Practical part of the lectures: mastering professional vocabulary by processing modern professional texts. Theoretical part of the lectures: conditional sentences, prepositions, infinitive, passive voice, verbs, participle I and II, reflexive use of verbs, modal sentences, comparison of adjectives.

4. Teaching methods:

The emphasis is placed on the communicative method, and also on the activities of the student during the class. During communication mutual interaction is important. Written texts are also processed. Practice during the class is designed for students to practice adequate vocabulary and other characteristics of the professional language.

Precondition courses

1. Educational goal:

The aim of the course is to familiarize students with the technologies that enable the use of modern methodologies in architectural and urban design. Technology here will be applied to the task of creating an architectural space at a given location or virtual

2. Educational outcomes (acquired knowledge):

In this course, students are trained to solve complex, functional and formal problems in the field of architecture and urbanism. Students will be using modern methodologies in the design process to develop analytical thinking and the ability to expand knowledge in solving the complex problems of the built environment. Also students will be familiar with the optimizations and evolutionary systems and potential applications in the design process.

3. Course content/structure:

The application of modern methodologies in architectural and urban design; application of modern techniques and technologies to architectural and urban design; the application adaptable systems to the problems in the field of architecture, urbanism and urban planning-programming, functional, structural aspects. Celurar automata, associative method in the method of modeling, bioengineering, robotics in architecture as a form of architectural production

Knowledge evaluation (maximum 100 points)

Final exam

Course status:		Elective	Elective								
Number of active tead	ching classe	es (weekly)								
Lectures:	Practical	classes:	Other teaching types:	Study research work:	Other classes:						
2 2		2 0		0	1						
Precondition courses			None								

1. Educational goal:

During the course, to students will be presented theoretical and methodological approaches and research directions of architecture and urbanism in the second half of the 20th century and early 21st century, with special emphasis on the interdependence of architectural / urban design theories and ideas, and the social context in which they arise. The new tendencies in contemporary architectural practice will be analyzed in order to understand the complex relationship between architecture / urban design theories and concepts, practices, and social context, so that students would be able to adopt adequate conceptual and design principles.

2. Educational outcomes (acquired knowledge):

By fulfilling the obligations of the course, students will be trained to develop a methodological approach and analytical thinking that will enable them to develop ideas and concepts, and apply them appropriately in the process of architectural / urban design

3. Course content/structure:

Contemporary theories and concepts in architectural and urban design; Use of methods and techniques in the analysis of architectural / urban design; Case Studies; Architecture / Urban Design Competitions as a method in the research and establishment of new strategies and the concepts in the development of contemporary cities; Use of modern technology in the design process

4. Teaching methods:

The method of critical analysis; illustrative-demonstrative methods, methods of synthesis of acquired knowledge; Interaction between participants in the learning process

1. Educational goal:

The application of basic, theoretical, methodological, scientific-professional and professional-applicative knowledge and methods in solving specific problems within the chosen field. Within this part of the work on the master thesis, the student studies the problem, its structure and complexity draws conclusions on possible solutions based on the carried out analysis. By studying the literature the student becomes familiar with the methods used in solving similar problems and the engineering practice of these solutions. The goal of the student's activity whithin this part of research is to acquire the sufficient experience by solving complex problems and tasks and the ability to apply the acquired knowledge in the engineering practice.

2. Educational outcomes (acquired knowledge):

Students are able to independently apply the previously acquired knowledge in the fields that they had previously studied, and understand the structure of the chosen problem. Students conduct a systematic analysis of the problem and draw conclusion about the possible solutions. By the independent use of professional literature, students widen their knowledge in the chosen field and study different methods and scientific papers related to the topic. In that way, students develop the ability to do analysis and identify problems within the given topic. The practical application of the acquired knowledge in different fields enables the student to develop the ability to understand the position and role of an engineer in the chosen field, and the necessity of cooperation with other professionals and team work.

3. Course content/structure:

The course structure is formed individually according to the needs of a specific master thesis, its complexity and structure. The student studies professional literature, graduation and master thesis of students who have previously done work on a similar topic, does analysis in order to find solutions to a specific problem defined by the thesis. A part of the course is done through individual study-research work. The study involves the active study of the primary literature and discoveries on the topic, the organization and realization of experiments, numerical simulation, statistical processing of data, writing and/or presenting a scientific essay at a conference in the specific scientific field of the master thesis.

4. Teaching methods:

The mentor of the master thesis defines and writes the task for the thesis and hands it to the student. The student is oblidged to write the thesis within the given topic which is defined by the master thesis task by using professional literature suggested by the mentor. While working on the thesis, the mentor can give additional instructions to the student, direct them to specific literature and advise him in order to enhance the quality of the master thesis. Within the study-research work, the student consults with the mentor, and, if necessary, with other professors teaching the subjects related to the master thesis topic. Within the given topic, the student conducts measurements, research, counting, surveys, statistical processing of data, if defined by the task of the master thesis.

1. Educational goal:

Enabling students to select the appropriate strategy to be certain fragments of urban change through planning documents, studies and analyses, which should lead to the most optimal spatial transformation. The planning process should in the best way meet the needs of future residents / users of urban areas, which is why it is very important that the concepts that will lead to changes systematically and methodically provide a synthesis of all the relevant forces and influences acting in contemporary urban systems.

2. Educational outcomes (acquired knowledge):

Students who successfully listened to and fulfil all obligations under the program will be able to form appropriate methods and strategies in the planning of urban transformation. All knowledge will be used in further architectural matters, using them on projects of all scales and programs.

3. Course content/structure:

Program of the subject will introduced students to the basic concepts and legislation in Serbia and urban design, and systems that are used in neighboring countries and Europe. Transformation of the urban environment will be examined regardless of their scale and characteristics. On exercises will be carried out assignments for students on the best way to detect adequate methods, models and concepts for transforming urban environment.

4. Teaching methods:

Classes will be conducted through lectures, exercises and field work in specific urban areas where students will be introduced to the current situation.

1. Educational goal:

The aim of the course is that students acquire knowledge and skills in planning and designing the exterior and interior design concept for everyone to familiarize themselves with the legislation relating to access to and accepted way of thinking about the different users.

2. Educational outcomes (acquired knowledge):

The outcome of the case is the ability of students to quality assessment of the value, potential and problems of already constructed buildings and areas in terms of accessibility, the willingness of students to apply theoretical knowledge in the field of design for all in the design of new spaces, both exterior and interior, as well as an understanding of human diversity and its impact on the planning and design of facilities and structures.

3. Course content/structure:

Occurrence, development, basic concepts, principles and elements of design and accessibility for all; Legislation on accessibility, affordable transportation system, types and characteristics of modern means of transport, organization of transport, leisure and green spaces, squares, street blocks, banks and parks to principles design for all; barriers in the exterior; Systematic troubleshooting accessibility to the settlement level, basic elements of the accessibility of facilities; Quality accessibility to approach the house, the entrance, the inner workings, room sizing and everyday objects, as well as the use of the Service operation and sizing of facilities and individual rooms, design and materials of buildings; Accessibility services; understanding and acceptance of diversity and accessibility design street furniture and other standard elements in the exterior;

4. Teaching methods:

Classes are conducted using modern scientific and interactive teaching tools (computer, video beam), lectures, exercises, seminars and consultations.

1. Educational goal:

The development of previously acquired knowledge about the elements, parts and assembly units in the architectural and urban spatial levels. Gaining critical attitude towards the elements and configuration.

2. Educational outcomes (acquired knowledge):

The knowledge acquired is used in architectural and urban design process, as well as theoretical scientific discussions of architectural or urban projects.

3. Course content/structure:

Elements of visual design in architecture and urban planning. Frames of aesthetic structure of the building. The parameters of the visual perception and experience of space. Organization of the concept of space-based elements. The structural elements of assembly.

4. Teaching methods:

Lectures, Workshop, graphical and seminar papers, consultations.

1. Educational goal:

Capacity in definition of refurbishment strategy; choice of various methods of reactivation, and definition of managing the process of building stock refurbishment under the different conditions of settlements development, especially sustainable development.

2. Educational outcomes (acquired knowledge):

Knowledge in the fields of establishing criteria for built stock evaluation, evaluation of building body (space organization, materials, construction systems, architecture, infrastructure, energetic efficiency, environment) and economic potential, making strategic decisions, and selection of the optimal reactivation methods in physical and economical sense, managing the refurbishment process, and coordination of multidisciplinary teams involved in the refurbishment of building stock process.

3. Course content/structure:

Principles of refurbishment; Socio-economic conditions of reactivation; Legal framework for reactivation; Changes of functions; Demographical factors; Studies in existing state of the stock; Analyses and definition of potential hazards; Models for inventorying of the whole building fund; Models for evaluating the whole building fund; Determining the size and time dimensions (continuity of existence, physical evolution, expansion and shrinking of the fund); Analysis of the dating of the composition transformations in order to understand the fund and determine a balanced relationship of existing and new buildings within the fund; Building, duration and decommissioning fund; Projected changes that can be expected in the building fund in the future, Economic assessment of the benefits of refurbishment cost benefit analysis, Identification of problems in the decision-making; Hierarchy of the problems; Multidisciplinary cooperation.

4. Teaching methods:

Lectures; Tutorials; Consultations; Workshops; Introduction to the work of relevant institutions, tests, essay, oral exam.

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Architecture

Standard 06. Programme Quality, Contemporaneity and International Compliance

The study programme is consistent with the modern world's scientific developments and the status of the profession, and comparable to similar programmes in foreign higher education institutions.

The study programme in the field of Architecture is designed to be complete and comprehensive and offers students the latest scientific and technical knowledge in this field.

The study programme in Architecture is comparable to and in compliance with:

- 1. The Technical University Cluj-Napoca, Architecture and Urban Planning http://www.utcluj.ro/english/architecture_and_urban_planning/
- 2. Ecole Polytechnique Federale de Lausanne

http://sar.epfl.ch

3. Delft University of Technology

http://www.bk.tudelft.nl

4. Massachusetts Institute of Techn

4. Massachusetts Institute of Technology http://architecture.mit.edu

The study programme Architecture at graduate academic studies is comparable with educational activities of the University network of Adriatic-Ionian Initiative UniAdrion (www.uniadrion.net), where the Department takes part in the organization of the master course Instruments and Methods for Architectural and Archaeological Cultural Heritage Conservation and Valorisation. The Department for Architecture and Urban Planning take part in the organization of this course as a partner in association with the University Carlo Bo in Urbin, University La Sapienza in Rome, University of Džemal Bijedić in Monsta, University of Sarajevo and University of Tirana. The cooperation agreement is signed at the University level in June 2007.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Architecture

Standard 07. Student Enrollment

Faculty of Technical Sciences, in accordance with social demands and its resources, enrolls certain number of students to the graduate academic studies Architecture, as budget financed or self financed students, which is defined by the special decision of the teaching and research faculty council and the founder. Student selection and enrolment of the applied candidates is based on their success in the previous education and entrance examination defined by the Rules of student enrolment to the study programmes.

Students from other study programmes, as well as individuals who completed different undergraduate academic studies or at least seventh degree of education, according to the previous classification of degrees, may enroll to this study programme. Thereby the Evaluation Committee (consisting of the department chefs participating in the realization of the study programme and the manager of the study programme) evaluates the passed examinations and other student activities relevant for the enrolment, and based on the recognized number of credits determines whether the student may enroll to the graduate academic studies. Passed courses and evaluation of activities are thereby recognized fully, partially - with the requirement of adequate supplement, or are not recognized at all.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Architecture

Standard 08. Student Evaluation and Progress

The final grade in each course included in this programme is formed by continual monitoring of students' accomplishments throughout the academic year and by passing the final examination.

Students master the study programme by taking examinations and thus obtaining a certain number of ECTS credits, in accordance with the study programme. Each course within the programme is worth a certain number of ECTS credits which students obtain by successfully passing the course examination. The number of ECTS credits is based on the quantity and quality of work students are required to submit during a certain course and on the Faculty of Technical Sciences` unique methodology for all study programmes. Students` success in mastering a certain course is constantly monitored during classes and is expressed in points. Maximum number of points obtained in a course is 100.

Students obtain points from a course through their work during classes, completion of the prerequisites and taking the examination. The minimal number of points a student can obtain by fulfilling the course prerequisites during classes is 30, the maximum 70.

Each course at the study programme has a clear and transparent mode of obtaining points. There are several ways students can obtain points: by participating in different activities during classes, by fulfilling the course prerequisites and by passing the course examination.

The final success of students at a course is presented with a grade 5 (fail) to 10 (excellent). The student's grade is based on the overall number of points obtained on fulfilling prerequisites and taking the examination, and in accordance with the quality of acquired knowledge and skills.

In order to take the final examination in the certain course, it necessary that the student obtains at least 15 points in the examination prerequisites. Additional conditions for taking the examinations are defined by the syllabus individually for each course.

Advancement of students during education is defined by the Rules of Studying at the Graduate Academic Studies.

Standard 09.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Teaching Staff

For the realization of the study programme in Architecture, there is teaching staff with necessary professional and scientific qualifications.

The number of lecturers coincides with the demands of the study programme and depends on the number of courses they lecture and the number of classes at these courses. The total number of teachers is sufficient to cover the total number of classes on the study programme, so each teacher has an average of

180 active classes (lectures, tutorials, practice classes, field classes) per year, i.e. 6 classes per week. In order to improve lecture organization and the knowledge development of students, a certain number of visiting professors from national and international universities give lectures to the students.

The number of associates corresponds to the needs of the study programme. Total number of associates at the study programme is sufficient for the realization of total number of classes in the programme, so that the associates have average 300 classes of active teaching annually, that is, 10 classes per week on average. A certain number of external associates, whose professional work and competences additionally contribute to the student education, are also engaged in lecturing.

Scientific and professional qualifications of the teaching staff relate to the educational and scientific field and the level of their participation. Each teacher has at least five references from the narrow scientific or professional field in which they lecture on the study programme.

The size of the lecture group is up to 32 students, practice groups are up to 16 students, and laboratory practice groups are up to 8 students.

No teacher has more than 12 classes per week. All data on teachers and assistants (CV, selections, and references) are available to the public.

Standard 10.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Organizational and Material Resources

To perform the study programme, the adequate human, spatial, technical and technological, library and other resources suitable to the study programme features and predicted students` number are provided. Classes on the study programme Architecture are held in such a manner so the minimum of 2 m2 of space is provided per student.

Lectures are held in amphitheatres, classrooms, computer and specialized laboratories. The specialized library of the Department for Architecture and Urban planning has over 3000 bibliographical units relevant for the study programme Architecture. There is also adequate equipment for all courses with the appropriate textbook literature, devices and supplementary equipment available on time and in a sufficient number for normal performance of the teaching process. Thereby, the adequate information technology is also available for performing the study programme.

Faculty has the library and the study room and provides a seat for each student in amphitheatres, classrooms and laboratories.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

Standard 11. Quality Control

Estimation of the study programme quality is elaborated regularly and systematically via self-evaluation and external quality control. One should place an emphasis on the multi-decade practice of students' surveys.

Study programme quality control is elaborated in the following manners:

- Surveying students at final lecture from the given course.
- Surveying students on the quality of the study programme and logistic support to the studies in the event of awarding the Diploma. Also, the studying comfort (classroom cleanness and tidiness) is evaluated there.
- Surveying the teaching and non-teaching staff on the quality of the study programme and the logistic support to the studies. This survey evaluates the work of the Dean's office, Registrar's office, library, and other services at the Faculty. Furthermore, the studying comfort (classroom cleanness and tidiness) is also evaluated

To monitor the quality of the study programme, there is also a committee with all heads of all Departments participating in the realization of the study programme, together with a student from each study group.
